

GM-4/GM-V

The dual GM element microphone, with its full low end, was developed exclusively for studio quality amateur radio SSB. With a flip of the switch the narrow HC-4 element can be used for contesting and DXing.

The GM Vintage Microphone has been designed for older high impedance radios requiring 10,000-30,000 ohms impedance. Specifically when used with a high impedance input, usually tube type vintage equipment (Collins, Central Electronics, Hallicrafters, etc.)

Element Type

dynamic cardioid

Frequency Response

GM 4:wide: 50 Hz - 16 kHz @ -55 dB

narrow: 600 Hz - 8 kHz @ -66 dB

GM-Vintage: 60 Hz - 16 kHz @ -55 dB

CC-1
Required
