Official magazine for users of  computer equipment.

# LAPTOP COMPUTER SPECIAL

Personal Advanced Laptop  
Computer **\$699\***  
for Only

- Includes six Microsoft programs in ROM
- FREE \$200 Merchandise Certificate with purchase

The ZP-150 is a 7½ lb. briefcase-size computer that goes with you anywhere. It includes a modem, calendar, and alarm, plus Microsoft WORKS, WORD, MULTIPLAN, BASIC, and more all built into ROM. And with your merchandise certificate, you can get up to \$200 worth of products FREE when you visit our store!

## QUANTITIES LIMITED

Zenith ZF-118-42 Personal Computer  
with FREE Monitor **\$899\***  
Only

- A Low-Profile computer with
- MS-DOS operating system
- 256K RAM
- two 5.25" drives
- 8 MHz operation
- monochrome and color graphics capability
- FREE monochrome monitor

Low Profile H-101-20 Personal  
Computer Kit **\$699\***  
Only

Includes MS-DOS operating system and 1 floppy drive. Monitor and second disk drive optional.

# Welcome to the Heath/Zenith Users' Group!

I'd like to start off the new year with all good news, but can't. So, as the old saying goes, I have some bad news, and I have some good news. The bad news is Bob Ellerton is stepping out from the HUG limelight after six fantastic years of service. Some of you may recall that Bob was first introduced in the December of 1980 Issue of REMark. Since then, HUG has grown and prospered into an elite 30,000 plus membership, and REMark has become the finest journal available for users of Heath/Zenith computer systems.

No, the good news is not that I'm taking his place, because I believe that no one can, or ever will. The good news is Bob is NOT leaving Heath Company, and will always be available to hold our hands when we need him:

Now for more good news. It might be just a tad early to be planning for HUGCON VI, but not too early to start thinking about it. Those of you who attended last year's conference may recall the good time everyone had during Don and Monty's antics. It sure was a relief to be able to relax with hearty laughter after a good meal! Well, this year I figured the only way we are going to be able to top our performance is to bring in a professional, and that's exactly what we're going to do. Direct from The Golden HorseShoe Review at Disneyland, the longest running stage show in history. Its star, Dick Hardwick, will be on hand to entertain you with his unique style of adult comedy. I can personally guarantee that even if you don't win the grand prize afterwards, you'll still leave smiling! For those of you who have never attended The National HUG Conference, this is the year to attend. Besides the dinner and entertainment on Saturday evening, fabulous prizes, super prices on computer hardware and software, and informative speaker forums, will again highlight this year's conference during the weekend of August 21, 22, and 23 at the O'Hare Hyatt Regency Hotel in Chicago.

And what of REMark? REMark will continue to be your primary source of technical information on Heath/Zenith computer systems, related hardware, and software. We will strive to keep up with technological advances in the industry (even though it is once again moving ahead at the speed of light), and still try not to forget our roots (the 8-bit machines). We want to hear from you, whether it's a letter to the editor, or a major series of articles. This is YOUR journal!

My name is Jim Buszkiewicz (pronounced: Bush-kay'-vits), and if you have any questions or comments, feel free to write to me here at HUG, or you can call me at (616) 982-3837.

It is our pleasure to present the following information to fellow members and the newcomers to the National Heath/Zenith Users' Group. The January Issue of REMark will provide you with compiled material especially designed to update your records with a cross-reference index to all previous articles found in REMark during 1986, a listing of companies that provide Heath/Zenith related hardware and software products, a listing of Local Heath/Zenith Users' Groups, related publications information, and a variety of small, but useful, tips for contacting knowledgeable individuals who are familiar with Heath/Zenith equipment.

## **For The New Member:**

This Issue of REMark will be your first contact with the Heath/Zenith Users' Group. The material contained herein represents a good look at the number of people, clubs, and organizations supporting the Heath/Zenith Computer Product Line. Further, HUG has selected that information which you may find most helpful to get you familiar with our organization. This Issue, along with the Software Catalog, Software Catalog Update and following issues of REMark provided as a part of your membership, will help you explore the exciting and powerful world of micro-computing.

## **For The "Oldtimer":**

The material contained in this Issue of REMark will help previous members stay current with new HUG policies, additional Local HUG Clubs, and the new support activities from companies that may be of particular interest. The HUG Software Catalog, HUG Software Catalog Updates, as well as the January Issue of REMark, are a permanent part of the HUG membership package provided to any user joining the HUG community.

## **General Heath/Zenith Users' Group Information**

### **Membership Eligibility**

A bona fide interest in Heath/Zenith computer related products is all that is necessary for membership eligibility. You need not be an owner of a Heath/Zenith product to join. Membership is open to any individual or company representative.

As a member, you will receive:

- A subscription to REMark, official Heath/Zenith magazine
- A HUG binder

- A personal identification card
- HUG Software Catalog and Updates
- Access to the Heath/Zenith Users' Group Software Library
- Access to the HUG Bulletin Board via MicroNET \*
- Access to the National HUG Bulletin Board System
- Discounts on a variety of Heath/Zenith computer products

\* **Note:** Requires CompuServe membership available from the Heath Users' Group.

These benefits are described in the following paragraphs.

### HUG Membership Rates

The following rate schedule applies as of January 1985 for membership:

Type of Membership	U.S. Domestic	APO/FPO & All Others
Initial	\$20.00	* \$35.00
Renewal	\$17.00	* \$30.00

\* **Note:** Must be in U.S. funds

The initial membership package includes the HUG binder, the HUG Software Catalog, Software Catalog Update, a Heath Parts Order Form, and a copy of the January Issue of REMark.

### New For 1987 . . .

You may now order new memberships or renew your membership using the toll free line normally used to order products from Heath. Call 1-800-253-0570 Monday through Friday 8 A.M. to 5 P.M. Eastern Time. In Alaska and Michigan call (616) 982-3411 or (616) 982-3463.

### Identification Card

When your membership is accepted, a computer generated ID card is issued. The ID card is sent to you separately via first class mail. This card identifies you as a member of the Heath/Zenith Users' Group. It contains a unique number which can be verified for membership. **(Allow several weeks for the processing and delivery of your personal ID card.)**

Your HUG ID Card entitles you to discounts on a variety of Heath/Zenith computer products. Please review and retain the following information for your records.

### HUG Discount Rules And Regulations:

1. You must be a member of the Heath/Zenith Users' Group to participate in the discount program.
2. Your ID card can only be used at your local Heath/Zenith Computers & Electronics Center or through mail order purchases placed with Heath Company. **Telephone orders will not be accepted.**
3. Your discount applies to the first \$5,000 of products purchased per year. The \$5,000 ceiling on purchases is based on the current list price of the products you purchase at the date shown on the invoice.
4. You may purchase only one of any given product per year, (e.g. one "Z" or "H" 100 series computer per year).
5. Your HUG ID card is not transferable. You will be required to show both your HUG ID and another suitable piece of identification to receive the benefits of the discount program.

6. You cannot make a purchase at the discounted rates without your HUG ID card. You must present your ID when placing your order for any item.
7. Your HUG ID cannot be used to purchase individual parts or HUG software products under the discount program from the Heath/Zenith Computers & Electronics Centers or from Heath Company. **HUG products are considered parts.**
8. The ID card can be used for a 10% discount on Heathkit computer related items only. (See the new expanded list of products available under the Discount Program in this issue.)
9. The ID card can be used for a 20% discount on Zenith Data Systems (assembled) computer related items only. (See the new expanded list of products available under the Discount Program in this issue.)
10. Any item purchased which installs as a modification to the internal portions of the computer (i.e. boards, drives, ROMs, etc.) is considered a kit item.
11. Any item (unless purchased as a kit) which is an external addition to the computer as a system (e.g. complete wired drive enclosures, printers, etc.) is considered a wired item.
12. Heath or Zenith Data Systems software is considered a finished or assembled item and therefore, can be purchased at the 20% discount. Since HUG software is considered a part, it is not included in either program.
13. Multiple discounts do not apply. You can use either "special prices" or your HUG discount, whichever is greater. The HUG ID may not be used with any promotional certificates offered by Heath Company or the Heath/Zenith Computers & Electronics Center.
14. **Heathkit Mail Order Catalog purchases must be accompanied by your HUG ID card and a SELF-ADDRESSED STAMPED ENVELOPE for return of your ID once the order has been processed.**
15. If you lose your ID card, you can only receive a replacement by purchasing a new membership to HUG at the current renewal rate.
16. To receive a replacement ID, send your request along with your **HUG ID number (found on your REMark mailing label) and renewal fee to:**

Attention: HUG Secretary/New ID Card  
 Heath/Zenith Users' Group  
 Hilltop Road  
 St. Joseph, MI 49085

### Publications

REMark, the official magazine for users of Heath/Zenith computer products, is sent to each member 12 times a year. The January Issue is designed as a cross-reference to the previous issues and contains valuable information that you may need. Individual back issues may be obtained during the current year. However, at the end of each year, all twelve issues become a single bound REMark Volume which may be purchased as a separate item. There are currently seven REMark Volumes available.

A subscription to REMark is included with your membership. The magazine is sent via bulk mail, as are most other organization's

publications. **Bulk mailing means YOUR REMark WILL NOT BE FORWARDED SHOULD YOU MOVE.** Therefore, please notify the HUG Secretary of your address change and the date which you wish the change to take effect.

We encourage each member to use REMark to communicate with other users. You can do this by submitting articles for publication. We strongly encourage any comments which you feel would benefit other users. We welcome your letters, hardware descriptions, software enhancements, applications programs, and other material you may wish to share.

### Major Article Program

Major articles are defined as articles containing 2000 words or more. Authors contributing major articles that are printed in REMark will receive a "Certificate of Recognition and Appreciation" from the Heath/Zenith Users' Group and their choice of any single Heath/Zenith software product **FREE or ONE HUG BUCK**. Educational programs or packages are not included in the Major Article Program.

The Heath/Zenith Users' Group is proud to announce the addition of the HUG BUCK as an incentive for authors contributing major articles to REMark. You can receive the HUG BUCK instead of free Heath/Zenith software. This award is worth \$100.00 toward the purchase of any Heathkit or Zenith Data Systems product. HUG BUCKs can be collected to completely or partially purchase the product of your choice. Specifics regarding the use of the HUG BUCK accompanies the award itself.

Those individuals that contribute smaller articles will receive the "Certificate of Recognition and Appreciation" from the Heath/Zenith Users' Group. As you can see, we feel that any information you send us is important.

Certificates, software or HUG BUCKs are sent out after your article appears in REMark.

### How to Submit Articles to REMark

#### What Subject?

Feel free to submit article manuscripts on any subject matter that you think will be of interest to the Heath/Zenith Users' Group community. Tutorial or How-To articles tend to be the most popular. Highly technical articles, although acceptable, do not have a broad readership base.

If you choose what might be considered a highly technical subject, try not to use terms which the average user would not be familiar with. If you should feel the need to use such terms, give a definition. Be kind to those who might not understand your application and explain your special programming tricks with a little extra detail. It's these "tricks" that help others to comprehend programming techniques and to be better programmers themselves.

If you feel that you have a unique program or hardware application, sit down and write about it. Do you have a special program for the bowling team, softball league, maybe a different business or farm program? Possibly you have interfaced your computer to some special machine to gather data for later evaluation. These are just some of the things other HUGgies are interested in reading about.

The following is only a sample list of possible subjects:

#### Software:

- Application Modification
- New approaches
- File handling
- I/O handling
- Enhancements
- Reviews

#### Hardware:

- Special applications (Schools, Business, Handicap, etc.)
- Enhancements
- Interfacing
- Problem solving

Review past issues of REMark. See what subjects have been covered. Try not to cover the same subject unless you have a better or totally different approach. Don't be a "me too" writer, open new doors.

#### How Big?

To qualify for the "Major Article Program," your manuscript must be 2,000 words or more (listings not included). Articles in excess of 5,000 words generally need to be broken into installments for separate publication.

Articles of less than 2,000 words and "Buggin' HUG" letters are acceptable. However, this type of submittal does not qualify for HUG reimbursement of a Heath/Zenith software product or HUG BUCK.

#### How About Photos?

If a photograph will help explain, include it. Clear, sharply focused, black and white photos reproduce best, but color photos can be used. Include a caption with each photo to help with the explanation. Any photographs become the property of REMark and cannot be returned.

#### What About Drawings?

If a drawing, like photographs, will help, include it. We request that you provide us with finished India Ink drawings or computer/printer art suitable for reproduction. Should you feel you are not capable of supplying finished artwork, check with a local high school drafting class. Generally, these students are anxious to display their talent. REMark, in some cases, will provide artwork, but this will delay publication of your article.

#### Is Hardcopy Necessary?

Yes! We request that any submittal include a printout of all files. Also, we would like to know what you feel your article should look like in print. In some cases, we do not have the processor the author used to duplicate text provided on disk.

#### Is A Disk Copy Needed?

Yes! REMark uses the latest techniques for the preparation of copy. Submitting your manuscript on disk along with all pertinent files moves the information through our system faster. We can accept any **standard** Heath/Zenith disk format. Your text files should not have visible or hidden coding, since these codes can delay the production process.

Should you have questions about an article you would like to submit, please feel free to contact the REMark Editor. All materials

received for publication in REMark become the property of the Heath/Zenith Users' Group.

Once you have completed your article, send it directly to:

The Heath/Zenith Users' Group  
Attention: REMark Article  
Hilltop Road  
St. Joseph, MI 49085

## How To Submit Programs To The Heath/Zenith Users' Group

After you have developed a program and before you submit it, check it thoroughly. Be reasonably sure that it is error free.

Three methods of submitting programs to the Heath/Zenith Users' Group are available for your selection based on your judgement of the finished program and its value to other members. Your program may be contributed under the following categories:

**Public Domain Library** — Free distribution to the membership via bulletin boards or other means available to HUG with the possibility of inclusion into the HUG Software Library.

**HUG Software Library** — For development by HUG as a finished software product to be offered for sale to other individuals as source for HUG income to further develop the users' group.

**Royalty Software Library** — Author supported, finished, reliable software with a signed contract paying the author for availability of the program to users of Heath/Zenith computer products.

**Submit your program by completely filling out the submittal form included in this issue of REMark.** Send your program on disk. Include with your submittal a complete listing of the contents on the disk and any additional documentation that you feel will be helpful for our records. Submit a sample "run" of your program from a hard copy terminal, when possible. If one is not available, hand copy as much as you feel necessary to give us an idea of how the program is supposed to perform. Be sure to sign and date the completed submittal form and check the category that you feel is appropriate for your program.

Once we receive your program, you will be notified. On the completion of the review, we will contact you with the status of your program. Remember, the person submitting the program is expected to handle any programming problems.

If your program is accepted and used by the Heath/Zenith Users' Group, you will be eligible for certain types of reward based on the category you have selected on the submittal form. **Please note, however, that no reward can be made until the product is released to the members of the user community through an announcement in the "New HUG Products" section of REMark.**

### Rewards For Program Contributions:

#### **Public Domain Software Library—**

You will receive any HUG software package free once your program has been added to the public library. Your package will be made available through the HUG Bulletin Board system (616) 982-3956.

#### **HUG Software Library—**

One year extension of your HUG membership. One year membership if you are not already a member. A free copy of your program as released by HUG. Your choice of any single Heath/Zenith software product.

#### **Royalty Software Library—**

You are paid on a quarterly basis for the number of disks sold during a three month period. Checks are generally sent 30 days after the end of each quarter. Since you are paid for your program submittal, no other compensation applies.

**Note:** Multiple related programs on one disk is considered one submittal (e.g. GAME1, GAME2, GAME3, etc.). If your programs are released on one product, this is considered a single contribution to the Heath/Zenith Users' Group.

### Notes On Software Submittals

HUG receives literally hundreds of programs each year for possible distribution to the user community. As you know, to review a software package requires learning the package. The review cycle is extremely time consuming. Therefore, we look for packages with the following attributes that are critical to the success of your program as a HUG Software Product:

We begin the review process as "beginners." In other words, your package must contain information that instructs the user through the set up and operation of the program from a very basic point of view. Remember to include information about your system that will enable the user (in this case, the reviewer) to duplicate the system requirements that made the software respond. Include operating system and version (e.g. CP/M 2.2.03), language and version (e.g. MBASIC 5.21), your machine type, and your memory requirements for the program.

Beyond set up and operation of the program itself, we look for thorough documentation as to what the program is going to do. If, for example, the program is a game; the user must know the rules, what is to be expected, what is the object of the game, and what input is required to make the game playable.

Next, we review the operation of the program. If the set-up and operational instructions are good, there should be no problem getting the program to perform as expected. In many cases, reviewers are stymied not because the program will not perform, but because the documentation for set-up and operation did not give sufficient detail to allow a thorough operational check.

A First-Time-Through-Section, although optional, is most advantageous for the reviewer and the end user. The First-Time-Through-Section should include the basics of setting up the program(s). It also should detail a mock run through your program with "dummy" data. This section should touch on most of the important options of your program. All option details should be explained in the documentation.

After we have made basic operational tests, we begin looking for undocumented "bugs" in the program itself. If a program defect is detected, the review process is ended. Any program fault that we find could be a reason for rejection of your program. Be sure to document operational peculiarities both for the reviewer and the end user. An example of one common program fault would be the lack of testing for both upper and lower case keys (e.g. "Y" or "y" for YES). There is nothing wrong with a program that only responds to upper case as long as the user is informed that the CAPS LOCK key should be down when operating the software. A good test for your program is to have another user in your area who is unfamiliar with your product attempt to operate it.

These points are some of the most important you should consider when generating software to be submitted to the Heath/Zenith Users' Group. As you can see, developing a solid software product

requires a new attention to detail whether you intend your product to be released through HUG or whether you intend to offer it through other channels. We have found that software which was developed following the basic information supplied here generates fewer user problems and, in general, gains the acceptance and respect of a vast majority of the user community.

Once you feel that your software will meet the requirements of the various HUG Software Libraries, please submit your material to the following address:

The Heath/Zenith Users' Group  
Attention: Software Coordinator  
Hilltop Road  
St. Joseph, MI 49085

### Ordering Information

HUG Software Products are ordered as a standard Heath Company Part. The order can be mailed on a Heath Company Parts Order Form or on a separate sheet of paper. When ordering, include with your payment the following information:

1. The part number (p/n), quantity, and description of the product to be ordered,
2. Your name, address and HUG ID number, and
3. 10% postage and handling, up to a maximum of \$5.00, minimum of \$1.00. UPS is \$1.75 minimum with no maximum. UPS Blue Label is \$4.00 minimum.
4. Visa & MasterCard also accepted, minimum \$10.00 order.

Send the order to:

Heath Company Parts Department  
Hilltop Road  
St. Joseph, MI 49085

**For Visa and MasterCard phone orders; telephone Heath Company Parts Department at (616) 982-3571.** Have the part number (p/n), description, and quantity ready for quick processing.

**Note:** HUG currently offers formats for CP/M, HDOS, ZDOS, MSDOS and CP/M-86 5-1/4 inch disks:

Single-sided, single-density, hard-sectored  
Single-Sided, single-density, soft-sectored  
ZDOS double-sided  
MSDOS double-sided  
CP/M-86 double-sided

**To order soft-sectored, add a "-37" to the part number (p/n) of the product** (e.g. 885-1207-37). Your order is processed by part number (p/n), not by description, so please be sure to include the "-37" when ordering soft-sectored.

**The Heath Company Parts Department is NOT capable of answering questions regarding software.** For additional information concerning any of the HUG software products, contact the Heath/Zenith Users' Group (616) 982-3463.

If you should have a problem with a HUG product, please call HUG to determine if you have a bad disk or another problem before you return the product for replacement. A call may save you a lot of time and money. If it is determined that your disk requires replacement, return the original disk along with the invoice directly to the Heath/Zenith Users' Group, Attention: Software Coordinator.

### Change Of Address

If you change your address, be sure to let us know. REMark is sent via bulk mail and is not forwarded. It takes approximately six weeks for our system to cycle through. Therefore, take this delay into consideration along with mail delays when notifying us. **Please tell us when the change is to take effect.**

Use the form in the back of this issue or a suitable copy to change your address. Send it directly to:

The Heath/Zenith Users' Group  
Attention: HUG Secretary  
Hilltop Road  
St. Joseph, MI 49085

### HUG Bulletin Board Via MicroNET

MicroNET is a time-share system of CompuServe Inc., which most anyone, located near a major city, can access through a telephone link. The National HUG Bulletin Board or SIG (Special Interest Group) on MicroNET provides a way of sharing ideas, questions, and information with over 3000 other members, by simply dialing a number and leaving a message.

MicroNET membership applications are available through the HUG Library or through any Heath/Zenith Computers and Electronics Center. The package includes free modem software, as well as the necessary information about CompuServe and one hour of free time on the system (see HUG Price List for further details). This membership is separate from the HUG membership application. For further information about CompuServe, contact the Heath/Zenith Users' Group, or CompuServe Inc., 5000 Arlington Centre Blvd, Columbus, OH 43220, (614) 457-8600.

A booklet of the HUG Bulletin Board commands and command descriptions is now available from the Heath/Zenith Users' Group. This handy reference can be used while on the system to save you both time and money. Since changes are made to the system on occasion, the material contained in the booklet may require some modification by the user in the form of notes as the changes are implemented. The BB-Reference is available as HUG part number 885-4700.

### HUGPBBS System — National HUG Bulletin Board System

The Heath/Zenith Users' Group has opened a public domain bulletin board system for those programs submitted to the Public Domain Library (See Program Submittals.) You may obtain public domain packages by signing up for access to the bulletin board system available at (616) 982-3956. You may become a member of the system simply by supplying the following information:

Your Name  
Your HUG ID Number  
Your Choice Of Password (up to sixteen characters)

Leave the above information as a private message to the SYSOP on the system or drop us a postcard requesting access to the HUGPBBS. Over 20 megabytes of programs are available under HDOS, CP/M, ZDOS and MSDOS in convenient catalog areas.

### Special Interest And Local HUG Groups

One of the best sources for information and help is the Local Heath Users' Groups which are becoming a major voice for the Heath/Zenith user community. Many of the local groups can be contacted through your nearest Heath/Zenith Computers & Elec-

tronics Centers. These stores can usually provide you the necessary contact information. A listing of known Local HUGs is published twice a year with new additions appearing under the category of "Local HUG News" found in most issues of REMark.

### Heath/Zenith Related Publications

Of major importance to the new user is the availability of additional information for the Heath/Zenith computer products. Many of the Local HUGs publish newsletters on a regular basis. Using the Local HUG Club listing appearing in this issue, the user can select those clubs that may produce additional documentation.

Three excellent independent publications are listed here:

### BUSS Newsletter

Editor: Charles Floto  
 Phone: (202) 544-0900  
 Address: 716 E Street SE  
 Washington, DC 20003  
 Rates: 20 issues/year  
 U.S. \$28.00  
 Others \$40.00

### H-Scoop

Editor: Henry Fale  
 Phone: (414) 452-4172

## Heath/Zenith Users' Group

# PROGRAM SUBMITTAL and AGREEMENT FORM

**Programmer:** \_\_\_\_\_  
**Address:** \_\_\_\_\_ **City-State** \_\_\_\_\_ **Zip** \_\_\_\_\_  
**Company (if any):** \_\_\_\_\_  
**Telephone:** \_\_\_\_\_  
**Program Name:** \_\_\_\_\_

Please describe your program in sufficient detail so that other users may understand its intended purpose and use. The following outline is suggested as a guide to help you in preparing an abstract of your program(s), should your program(s) be selected as a future release of the HUG Software Library. Your outline of the abstract should be prepared and submitted on an attached sheet of paper with this Submittal Form. Be sure to fill out all the information requested on this form.

### Suggested Outline:

Introduction:  
Requirements:  
    Software  
    Hardware  
List of the Programs:  
Program Content:  
    Include Special Notes  
Comments:

**Note:** Refer to the HUG Software Catalog for examples and details in using this outline.

Brief information for the Software Evaluator of your program(s):

**Prepared on/for computer model:** \_\_\_\_\_

**Special hardware/software configurations, if any:** \_\_\_\_\_  
\_\_\_\_\_

**Program requires:** \_\_\_\_\_ **bytes of memory**

**Language:** \_\_\_\_\_ **Version:** \_\_\_\_\_

I would like you to include the program(s) described on this agreement in the (check one)

- Public Domain Library
- HUG Software Library
- Royalty Software Library

I understand and agree that HUG may distribute it at nominal cost to HUG members.

I assure you that the program is my own design, that I have run and de-bugged it, and that I will answer questions any library user may have about it. You may modify and adapt the program at your option to make it more suitable for your use and the library.

I represent that the program is mine to submit and that any necessary permissions for its use and sale have been obtained.

**Date:** \_\_\_\_\_ **Signed:** \_\_\_\_\_

**P/N 885-6**

# It Even Runs SUBMIT!

## Upgrade Painlessly From An H-89 To A 16-Bit Machine With Help From HUG

*Pat Swayne*

*HUG Software Engineer*

If you own an H-8 or H/Z-89/90 computer and a wealth of software for it, you may have been reluctant to upgrade to one of the newer 16-bit computers because of the inability of those machines to run your programs. But with one of HUG's CP/EMulator programs, you should be able to run most or perhaps all of your favorite CP/M programs on an MS-DOS computer. And if you use HUG's HRUN HDOS emulator, you can even run many HDOS programs.

There are two CP/EMulator programs available from HUG. The original CP/EMulator (885-3007-37) is designed for use on H/Z-100 dual processor computers, and takes advantage of the dual processor architecture of the H/Z-100 to run your 8-bit programs under MS-DOS. The newer CP/EMulator II (885-6002-37) is designed for use on H/Z-100 PC and H/Z-200 Advanced PC series computers. It emulates the 8-bit processor itself, or will use an NEC V20 processor if you have one installed (more on that later). Both CP/EMulator programs provide the most complete CP/M emulation available under MS-DOS, and will even run the CP/M SUBMIT program. No other emulator I know of, not even those using co-processor boards, is capable of running SUBMIT. CP/EMulator II also includes ZEMulator, which provides an H-19/Z-100 environment (escape codes, function keys, etc.) under which your 8-bit programs can run as they do on your old computer.

### Limitations Of CP/EMulator

Because the hardware on the 16-bit computers is different from that in your old H-8 or H-89, some programs cannot be run under CP/EMulator. Among these are modem programs that access the port hardware directly, and disk sector editors that use direct BIOS calls. Because an 8-bit timer interrupt is not generated on 16-bit machines, your 8-bit programs that use the timer interrupt will not run. Some games fall into this category, although most HUG games do not. Heath/Zenith CP/M systems maintain a "tic counter" in low memory that is used for timing by some programs. These programs may not run properly under CP/EMulator II on PC-compatible computers, because the counter is not incremented evenly due to timing differences. The HUG "SEA BATTLE" game is the only program I know of that is affected that way.

Some Microsoft languages that were released for use only on H-8 or H/Z-89/90 computers may need patches before they will run under CP/EMulator. You can write us for the patches if you need them. Microsoft languages that will run on an H/Z-100 under CP/M will also run under CP/EMulator without patches. If a program is designed to be run under Microsoft BASIC or some other language, you will need to bring that language over from your 8-bit computer, rather than trying to run the program under GW-BASIC, etc.

### Making The Transfer

Before you can run your H-8 or H/Z-89/90 programs on an MS-DOS computer under CP/EMulator, you must transfer the programs from your CP/M disks to MS-DOS disks. On an H/Z-100 (dual processor) computer, you can read H37 format 48 tpi disks with the RDCPM program, but the PC version of RDCPM cannot read those disks. CP/EMulator II comes with a HUG version of RDCPM that can read H37 48 tpi disks as long as they are recorded in double-density format, and it also comes with a program called TF89 that allows you to connect your H-8 or H/Z-89/90 to your PC with a serial cable and transfer files over it.

### How Fast Is CP/EMulator?

If you run CP/EMulator II on an H/Z-100 PC series computer, your 8-bit program will run more slowly than on a real 8-bit computer, because the 8-bit machine code itself must be emulated. However, you can replace the central processor chip (8088) in your computer with an NEC V20 (available from many parts vendors), and then emulation will be as fast or faster than an H-89. Some screen operations will still be slower due to the amount of emulation required to duplicate them. On an H/Z-200 Advanced PC, emulation is as fast as an H-89 even though the 8-bit code is emulated, because of the extreme speed of those machines. On an H/Z-100 dual processor computer, emulation is also fast because the built-in 8-bit processor is used to run 8-bit code.

**Note:** If you already own either version of CP/EMulator, and you purchased it before September 1986, you should know that the programs have been improved substantially. You can send in your original HUG disk and \$5.00 to get the upgraded version. Send your disk to HUG, Attn: Nancy Strunk, Hilltop Road, St. Joseph, MI 49085. \*

AUTHORIZED SALES AND SERVICE

## Have it your way.

If you're looking for a PC, you couldn't do better than Zenith. And you couldn't buy your Zenith at a better place than First Capitol. We'll put together a system the way YOU want it. And we'll do it for a price that competes with the guy who just sells boxes that fall on his loading dock.

## Great Prices. And A Great Machine.

We're committed to Zenith. And to you. the standard Zenith models that come from the factory are a good buy. And we'll be glad to sell you one at a price that will match anyone. But if you want the full potential, we'll fix it up for you. Larger disk drives. More memory. Internal tape back up. Removable Winchester. All at a budget pleasing price.

## We make Zenith Scream.

When a new model comes out, we're among the first to get it. Our Zenith fanatics take it apart, prod it and poke it until it screams for mercy. Then we put it back together (usually with some new parts) so that it REALLY screams. With power.

## You'll be back.

Check with us. Check elsewhere. We'll put together a custom quotation for you we GUARANTEE you'll find interesting. We think you'll come back to us. There's a reason for the growing list of companies, government agencies, and end users that know us as the source for Zenith. Your Way.

 **First  
Capitol

## The StockSystem Challenge.

We will meet or beat any dealer's price on new stock Zenith systems. And for enhanced systems, no one can touch our combination of value, performance, and custom service.

Before you buy . . . . .

# Call Us First. And Last.

# Some Favorite

# HUG Software

*Joseph Katz*  
103 South Edisto Avenue  
Columbia, SC 29205

I was interested to realize that some of my favorite programs for my PC-, XT-, and AT-compatibles came to me on HUG software disks. It doesn't surprise me, however, because logic suggests that users know the needs of other users. On that same principle, perhaps I can do something useful by mentioning a few of my own HUG favorites. In fact two are run automatically whenever my computers boot: they're loaded by the AUTOEXEC.BAT file in the root directory of Drive C.

One of those two is SS.COM, a screen saver on the Screen Saver Plus disk (Part Number 885-6009-37). It's a TSR (Terminate and Stay Resident) program that monitors the keyboard so as to blank the monitor whenever the computer is on but not in use. That way the display screen does not suffer early from having characters burned in when I must interrupt a work session. I set SS to blank the screen after three minutes of keyboard inactivity: you can set it for from one to nine minutes.

The other HUG program in my AUTOEXEC.BAT file is DPATH.COM, a Path supplement on its own disk (Part Number 885-8039-37). Version 2 of MS-DOS introduced hierarchical directories, mainly for use in organizing hard disks. Unfortunately, that version of MS-DOS has no automatic way to find a program you want to run if it is in a different subdirectory from the one in which you try to run it. Fortunately, version 2 of MS-DOS has the integral command Path, with which you can specify paths to the directories holding programs you might want to run from other directories. Unfortunately, the Path command is useless for other than COM, EXE, or BAT files: it won't lead MS-DOS to data files or program overlays. Run Dpath with a duplicate of the pathnames fed to Path, however, and much of the trouble disappears. There are some instances in which even the Path/Dpath combination does no good, but it's the answer for most situations.

One real sleeper on HUG's ZDOS/MSDOS Miscellaneous Utilities disk (Part Number 885-3025-37) is Reprint. Despite its title, the program has nothing to do with "reprinting." Instead it's a printer redirection utility. It diverts output from the printer to a disk file. A shareware program I use for recording grades does not print them suitably for my needs, so when the time comes for grade reports I simply print them to a disk file which I then edit and print with my word processing program. I've used other printer redirection utility programs, but Reprint has two advantages over them: it's completely transient and it works well with the Heath/Zenith versions of MS-DOS. The others I've used are TSR programs, which means they continue to redirect printer output even when I'm ready to do something else. Reprint, on the other hand, is invoked with the

name of the program that will produce the printer output and the name of the file to which it should be redirected. Once the program has ended, the system is back to normal. Reprint is supposed to work only with version 2 of MS-DOS: it works with version 3.1, as well.

I discovered Reprint quite by accident, when a grade report had to be done and I found that none of my other printer redirection programs would work with version 3 of the Heath/Zenith MS-DOS, but that's a typical accident with HUG software disks. Returning to my point at the beginning of this note, the problem solved by one user often turns out to be a need shared by another user. Two other programs on the Screen Saver Plus disk exemplify that point. Not only didn't I need them when I bought the disk, but also I couldn't imagine ever needing them. DS.COM allows text shown on a color monitor to display simultaneously on a high-resolution monochrome monitor. Once I hooked a high resolution monitor into my system, I was thankful for this dual-screen program that saved me from having to use the Mode command in MS-DOS to switch back and forth. Now I can't imagine having a setup like mine without DS.COM to make life easier. Nor could I imagine why I might want to slow down an AT-compatible H/Z-241 to nearly the speed of an XT-compatible H/Z-158. Then I got my H-241 and decided to kill a few minutes with an old action game. The action turned out to be new and completely unexpected. I simply could not keep up with the game. It was going too fast for me. That was when I remembered CS, which let me slow down the 241 enough to give me a chance at winning. I didn't. It wasn't the fault of CS, and I don't want to talk about it anymore now anyway.

One of my other favorites from HUG is the Hug File Manager on that same ZDOS/MSDOS Miscellaneous Utilities disk I talked about earlier. There are two versions on that disk: HFMJR and HFM2, the latter with more features than the former; you choose the one better suited to your own needs. Both are reminiscent of the disk management utility program that comes with Lotus' 1-2-3 spreadsheet. It's a kind of program that displays in sorted order the files in a subdirectory. You can do things such as erase, copy, print, or view them with more control and comfort than is possible from the naked MS-DOS command line. I really like it for archiving files on my hard disk. What I do is flag selected files with an HFM command, do a mass copy from hard disk to floppy diskette with another HFM command, then erase the now-unneeded files from the hard disk with a third HFM command. It's a very nice way to work.

You can use another HUG software disk, the HUG Menu System (Part Number 885-3020-37) to give novices an even nicer way to work. This nicely-designed set of programs — including a version of HFM — allows the creation of a menu-controlled computer. You can program a set of hierarchical menus that allow the naive user to go from one function to another without ever encountering the mysteries of MS-DOS and with help only a keystroke away. As with many of the programs on HUG software disks, you can find similar programs elsewhere. Just as with those others, however, this one not only is among the more useful of its kind, but also is designed especially for our computers and is sold at a price so low as to make shopping for a lower price seem silly.

One program I often mention in "Mainstream Computing" is HUGMCP, the HUG Modem Communications Program on its own disk (Part Number 885-3033-37). As its name indicates, HUGMCP is a communications and file transfer program. It's one of a special kind, though. The direction pursued by many communications programs is towards nearly complete automation. I like that direction, but it's not the only one possible nor is it always the most desirable. HUGMCP goes in another direction. Small, fast, reliable, and easy to control, it's one of a select group I carry in a plastic case of programs whenever I travel.

ZEMulator and CP/EMulator II (Part Number 885-6002-37), on the other hand, allow my programs to travel from my Z-100 to my compatibles. CP/EMulator II runs those from the CP/M side of the Z-100; ZEMulator runs those from its MS-DOS side; together they do a great deal to extend compatibility along the Heath/Zenith line of microcomputers.

That, I think, is one of the things I like best about HUG software: whenever and wherever possible, there are Z-100 and compatible versions of the same program on the same disk. For those of us with both kinds of machines, the strategy is at least a magnificent bonus. One of the few computer games I used to enjoy was Adventure, a microcomputer version of the classic mainframe game by Crowther and Woods. It's a way for me to have play time at a pace suited to my advancing years. When I discovered that HUG had an MS-DOS version of Adventure that would run on compatibles, as well as on the Z-100, I snatched it. I still enjoy it. If you're new to microcomputers, you really ought to journey back to the golden days of yesteryear and explore Colossal Cave. At the very least you'll discover the significance the magic word "XYZZY" has for computer buffs. Perchance you'll be able to discover and store treasures towards a laudable score. \*

## H/Z89-90 PRODUCTS

### Replacement Back Panel

Replaces the existing metal back panel. Adds cut-outs for two 5¼" drives, 8" floppies, Winchesters, joy sticks, extra printers, modems, audio output, instrumentation and many, many more.  
RBP-200 ..... \$35.00

### 4MHz Speed Up

Plug-in unit doubles the computer's speed. Eliminates long waits for program execution. Fully supports Heath, C.D.R., and Magnolia. No trace cutting.  
DSM-240 ..... \$99.97

### I/O Board Expansion

Adds four additional I/O board slots inside the computer case. Now have seven right-hand and four left side slots. Easy DIP switch port selection. Now run up to four disk controllers or multiple printer boards or ???  
EXP-700 ..... \$395.00

### Upgrade Monitor ROM

Replaces existing monitor. Supports 4 MHz operation. Boots eleven different devices. Expanded commands.  
KMR-100 ..... \$59.95

### Extra Cooling

Extremely quiet 2½" fan provides required extra cooling for hot machines. Easily mounts between the two card cages. Plugs inside with the existing fan connector.  
SCF-200 ..... \$59.95

### Transportable Conversion

Kit contains everything to convert an '89-90 into a 32-pound transportable computer. Nine inch amber CRT. Detachable keyboard. Conversion requires only a screwdriver and nutdriver.  
TRA-890 ..... \$950.00

DSM-240, KMR-100, RBP-200, SCF-200 include \$3.50 S&H/unit. EXP-700 include \$6.00 S&H/unit. CA residents add 6½% sales tax. All prices subject to change without notice.

## P/N 885-1135-[37] HDOS Variety Package

**Introduction:** This group of three disks contains various programs for the HDOS operating system. Rather than hold these programs for an 'all the same type of program' disk, the decision was made to release them in a 'variety' type package. These programs include, utilities, games, and two device drivers.

**Requirements:** These programs require the HDOS operating system version 2.0 or greater. An H-8/H-19 or H-89/90 computer with at least one disk drive is also required. In the case of the device drivers, the H/Z-25 or Diablo 630 printer will be needed. MBASIC Version 4.82 is required for SMART CRAPS.

The following files are included on the HUG P/N 885-1135-[37], HDOS Variety Package disk set:

### Disk A

FREDIT .ABS	FREDIT .DOC
WM25DVD .ACM	WM25DVD .DVD
WM25DVD1 .ABS	WM25DVD1 .ASM
WM25DVD2 .ABS	WM25DVD2 .ASM
WM25DVD .DOC	DEMO .TXT
README .DOC	

### Disk B

CALENDAR .BAS	CALENDAR .BAS
SNOOPY .ART	HBRBH .ABS
HBRZH .ABS	HBR .DOC
PD .ASM	PD .DVD
PD .DOC	

### Disk C

CRAPINS1 .BAS	CRAPINS2 .BAS
CRAPS .BAS	CRAPSTAT .BAS
CRPSCR1 .DAT	CRPSTA1 .DAT
MPCRAPS .BAS	CRAPS .DOC
SPCRAPS .BAS	

### Program Authors:

FREDIT — Maynard Mansfield  
WM25DVD — William W. Moss MD.  
CALENDAR — Brent Malcolm  
HBRIDGE — Robert Hassard  
PD — Walt Bilofsky  
SMART CRAPS — C.F. Mowery Jr.

### Program Content:

**FREDIT** — Fredit makes available to the small system running under HDOS, the speed and simplicity of full-screen text editing. The editor occupies less than 5700 byte in RAM, so serious text editing may be undertaken on a 32k machine. Fredit makes use of all the editing functions provided by the H-19 terminal, and most of the H-19's special function keys are employed as well. The 25th line of the terminal screen provides a continuous display of the status of the editing process.

**WM25DVD** — This H-25 device driver is considerably more sophisticated than the one Heath distributes. It permits individual settings on each of eight logical units. Thus, the user can individualize the formats desired for various types of documents without having to change the device driver settings. Also, when a new setting is made, it goes into effect immediately even if the driver has already been loaded into memory; no need to reboot to make it work. There are 18 set options allowed by this driver.

**CALENDAR** — This program computes a calendar for any year and prints it in various forms. It prints an annual calendar with, if desired, an attached graphics of Snoopy on his doghouse. It also prints a monthly appointment calendar (one month per page) which has the usual format for all days of the week (Sunday

through Saturday) or a second type with just Monday through Friday. The latter format allows larger spaces for your entries.

**HBRIDGE** — HBRIDGE is a program for playing Bridge. It is suitable for the novice bridge player. The computer plays three hands (or two if north or south are the declarer) and the human player plays one (or two). HBRIDGE bids using fundamental conventions, plays following the simplest of rules, and then scores each hand when finished. The score is recorded on a disk file bearing the human player's name. After playing a hand, a display of all four hands may be obtained, or the north-south hand may be switched with east-west and replayed, or a new deal may be called for. With this program, the computer plays a fair quality of bridge. It makes mistakes just as humans do. In this respect, it is human-like. For a person who also makes mistakes, this can be an enjoyable program.

**PD** — This is a device driver for the WH-44 style printers (Diablo 630) to allow the use of proportional spacing type print wheels even when NOT equipped with the Diablo word processing hardware option. It is a modified version of the LPH44 driver originally supplied by Heath with HDOS version 2.0.

**SMART CRAPS** — This game is designed not only to provide realistic and entertaining one-player and multi-player versions of the dice game, Craps, as it is played in most casinos, but also to assist both novice and experienced players alike in becoming 'smart' craps players, via the display of a wide variety of statistical information during play of the games and a separate statistical program. The data displayed is designed to help smart players develop betting systems that increase their winning potential by decreasing the house advantage.

TABLE C Rating: (9)

## P/N 885-3007-37 Z-DOS/MS-DOS CP/EMulator Update

CP/EMulator is a program that allows you to run CP/M programs under Z-DOS or MS-DOS on an H/Z-100 (dual processor) computer. It has been improved considerably and re-released under the same HUG part number. For a description of the original program, see page 27 of your HUG Software Catalog Update #1.

CP/EMulator has been improved to run faster and handle "tough" CP/M programs that it could not run before, including CP/M WordStar (all functions work), PIP (including all switches), and the CP/M editor, ED. Screen I/O is faster, so that word processors and action game programs are more useful and enjoyable. With the new CP/EMulator, you can run nearly all of the CP/M programs in the HUG library under MS-DOS or Z-DOS. (However, CP/M Microsoft BASIC is required for some programs, and is not supplied.)

If you have the original CP/EMulator and would like to upgrade, send in your original HUG disk and \$5.00 to the Heath/Zenith Users' Group, Attn: Nancy Strunk, Hilltop Road, St. Joseph, MI 49085. Make checks payable to: Heath/Zenith Users' Group.

**Note:** Since CP/EMulator now runs the CP/M editor, the HUG CP/M editor is no longer included on the disk.

## P/N 885-3033-37 Update

HUGMCP, HUG P/N 885-3033-37, has been updated to version 1.1. This newer version now has the ability to set the colors of the text display, and if you're running an H/Z-100 PC/200 PC, the

screen border, background, 25th status line text, 25th status line background, all independently. Additionally, HUGMCP can now concurrently print the data in the capture buffer while communicating with the host computer. Printer 'busy' will not cause the program to 'hang' or issue error messages as most other software will. Current owners of HUGMCP can obtain this update by sending their original 885-3033-37 disk along with \$5.00 to: Heath Users' Group, Hilltop Road, St. Joseph, MI 49085, Attn: Nancy Strunk. Make checks payable to Heath Users' Group.

## Attention HERO 2000 Owners!

Looking for an inexpensive modem package that'll interface your H-100 or H-100 PC to your new super robot? Look no further! HUGMCP was designed with HERO 2000 in mind! HUGMCP responds properly to the ANSI 'disable keyboard' command as required by HERO 2000. It will also do software transfers using standard XMODEM protocol, or ASCII transfers using XON/XOFF protocol. HUGMCP is available for only \$40 from HUG, and has a part number of 885-3033-37. Why pay 4 times more than you really need to? Order your copy today from the Heath Parts Department by calling area code (616) 982-3571.

## P/N 885-3034-37 MS-DOS ZPC Support Disk

**Introduction:** The ZPC Support Disk contains files to help you make better use of the HUG Z-100 PC Emulator (HUG p/n 885-3030-37). This disk contains patches to update early releases of ZPC itself, patches for several popular software packages that enable them to run under ZPC, and an emulator for the ANSISYS device driver supplied with the Z-100 PC version of MS-DOS.

**Requirements:** To use this disk, you need ZPC itself, and an H/Z-100 (not PC) computer and MS-DOS version 2 or 3. All of the programs for which patches are supplied write directly to video memory when they are run on a real PC, which means that you need 768k of memory in your H/Z-100 to run them under ZPC.

This disk contains the following files:

README .DOC	ANSI .COM
FIXASM .DOC	ANSISYS .ASM
PREFIX .BAT	ASCII .DEF
REPLY .COM	Z150ROM .DEF
FIXZPC .BAT	ANSI .ASM
FIXZPC1 .DAT	LTSPOCH .BAT
FIXZPC2 .DAT	LTSPOCH .DAT
FIXZPC3 .DAT	DBPCH .BAT
FIXZPC4 .DAT	DBPCH .DAT
FIXZPC5 .DAT	DBCPCCH .BAT
FIX3A .BAT	DBCPCCH .DAT
FIX3A .DAT	FWPCH .BAT
DOS3 .BAT	FWPCH .DAT
DOS3A .DAT	FW1PCH .BAT
DOS3B .DAT	FW1PCH .DAT
DOS3C .DAT	FW2PCH .BAT
DOS3D .DAT	FW2PCH .DAT
DOS3E .DAT	ENABPCH .BAT
ANSISYS .COM	ENABPCH .DAT
MMPCH .BAT	PALDPCH .DAT
MMPCH .DAT	MW1PCH .BAT
VXPCH .BAT	MW1PCH .DAT
VXPCH .DAT	MW2PCH .BAT
EDIXPCH .BAT	MW2PCH .DAT
EDIXPCH .DAT	SC3PCH .BAT

PALPCH .BAT SC3PCH .DAT  
 PALPCH .DAT SC3IPCH .BAT  
 PALDPCH .BAT SC3IPCH .DAT

**Program Author:** Patrick Swayne, HUG Software Engineer

**Disk Content:** The files on this disk are divided into three sections. The first section contains patches for ZPC itself. The patches are self-installing, and a special batch file called PREFIX.BAT selects the proper patches for your release of ZPC. The patches are only for level 3 of ZPC, but the assembly language code for the patches is provided in the file FIXASM.DOC so that you can fix your source code and assemble updated lower levels.

The second section of the ZPC Support Disk contains an emulator for the ANSISYS device driver that is supplied with MS-DOS for the Z-100 PC series computers. Some PC programs require ANSISYS, but it will not work on a Z-100, and the ANSICON.DVD driver supplied with Z-100 MS-DOS will not work while ZPC is in the PC mode. The file ANSISYS.COM on this disk, when loaded after ZPC, provides an exact emulation of the ANSISYS driver, so that programs requiring it will run properly. Once ANSISYS.COM has been loaded, ANSI emulation can be turned on or off using a companion program, ANSICON.COM. You just give the command ANSICON to turn emulation on, and ANSIOFF to turn it off.

The third section of the ZPC Support Disk contains patches that enable the following programs to run under ZPC: LOTUS 1-2-3 (PC version, release 1A), DBASE III (version 1.1), FRAMEWORK (version 1.1), ENABLE (version 1.1), MULTIMATE (Z-150 version 3.3), VOLKSWRITER DELUXE (version 2.0), EDIX (version 2.05), and PC PALETTE (version 1.0). Also included is a corrected patch for the Heath/Zenith release of SuperCalc3, a patch for the IBM PC release of SuperCalc3 (release 2.0), and alternate patches for Microsoft Word.

**TABLE C Rating:** (10)

## P/N 885-3035-37 MSDOS SPELL5 & SPELL5F

**Introduction:** SPELL5 and SPELL5F are two spelling checkers designed to make spelling checking easier and truly useful. SPELL5 is a spelling checker for the English language, and SPELL5F is a spelling checker for French.

**Requirements:** Both programs require the H/Z-100 computer system (not PC) with 192k of memory. Included, are versions that will also work with 128k systems. Both programs will work with either monochrome or color CRTs. SPELL5 will work with any version of MSDOS.

The following programs or files are included on the HUG SPELL5 disk P/N 885-3035-37:

SPELL5 .COM	SPELL5F .COM
DICTION .SPL	DICTIONF .SPL
SPELL5 .DOC	SPELL5F .DOC
SPELL5 .128	FRENCH2 .CHR
README .DOC	

**Program Author:** Ronald Perrella

**Program Content:** The SPELL5 program is a memory based spelling checker. It loads a dictionary called DICTION.SPL from the disk and checks a file for spelling errors. When an unknown word is encountered, it can either be skipped or integrated to the dictionary. The dictionary is a sorted list of words separated by a carriage return and linefeed. This dictionary can be edited by any text editor, if necessary. Multiple dictionaries are supported and so is IN CONTEXT spelling checking.

There is also a French version of this program, and in order to be used properly, the ALTCHAR.SYS file must be changed to the FRENCH2.CHR file.

The SPELL5 program was designed to be easy to use, not to be a 50,000 word speller. Its true capacity depends on the amount of memory you have. In a 192k byte system, you should be able to store about 10,000 words, and about half that many in a 128k byte system.

**TABLE C Rating:** (10)

## P/N 885-3036-37 MS-DOS TREE-ID

**Introduction:** This Z-BASIC program was written to demonstrate a "generic" menu program for Z-BASIC, and arouse interest in tree identification using both text and graphics.

**Requirements:** TREE-ID requires an H/Z-100 (not PC) computer system with two 5-1/4" disk drives, 192k of system memory, a printer, 3 banks of 32k or 64k color memory, a color monitor, and either Z-DOS or MS-DOS.

The following files are included on the HUG P/N 885-3037-37 TREE-ID disk set:

### Disk A

**Author:** Ronald B. Berger

**Program Content:** TREE-ID, is a tree identification program based on a simplified method from T.E. Shaw's pamphlet, "Fifty Trees Of Indiana", 1981, published by the Indiana State Forestry Division and by the Forestry Department Of Purdue University. This database is entirely menu driven, and very easy to use. It presently contains forty-five trees, but more menus and tree descriptions could be readily added. This program uses the high resolution color graphics capabilities of the H/Z-100 (not PC) computer to display help figures, as well as the leaves of tree being identified.

**Comments:** Although this program was written for floppy disk drives A: and B:, the source code could be changed to allow the program to work on a hard disk, or memory disk.

**TABLE C Rating:** (10)

## P/N 885-3037-37 MS-DOS ZPC Version 2

**Introduction:** ZPC Version 2 is a program that emulates an IBM PC or compatible computer on an H/Z-100 series (dual processor) computer. It allows you to run many IBM PC programs on your H/Z-100 without having to add an expensive hardware modification. It supports all video modes, including text and graphics, of an IBM color/graphics card. Version 2 of ZPC is a significant enhancement of the original ZPC (HUG p/n 885-3030-37), and with it you can run much of the important PC business software. A list of programs that will run under ZPC Version 2 as of 3-13-86 is supplied later in this description.

**Note:** This version of ZPC supersedes both the original ZPC and the ZPC Support Disk (885-3034-37). If you have ZPC version 1, you can upgrade to version two by sending your original distribution disk and \$20.00 to Heath Users' Group, Attn: Nancy Strunk, Hilltop Rd., St. Joseph, MI 49085. If you have both ZPC version 1 and the ZPC Support Disk, you can upgrade by sending both disks and \$15.00 to HUG. Make checks payable to: Heath Users' Group.

For a description of the improvements in ZPC Version 2 compared to version 1, see the article "ZPC Version 2 is Here" in this issue.

**Requirements:** ZPC Version 2 requires an H/Z-100 or ET/ETA-100 series computer with MS-DOS version 2 or 3 and exactly 768k of memory. A small memory version of ZPC is supplied that will run in less than 768k of memory, but that version will only run a few PC programs. For best results, your computer should be equipped with color memory (either 32k or 64k chips).

The ZPC Version 2 disk contains these files:

README .DOC	DISK .ACM
ZPC .COM	DOS .ACM
ZPCSM .COM	KEY .ACM
PC .COM	PIXEL .ACM
Z100 .COM	PRINT .ACM
SETZPC .COM	PUTCHR .ACM
ANSISYS .COM	SCROLL .ACM
SETANSI .COM	PC .ASM
PATCHER .COM	Z100 .ASM
DEMO .COM	SETZPC .ASM
PATCHER .DAT	ANSISYS .ASM
FIXCB .COM	SETANSI .ASM
FIXQB .COM	PATCHER .ASM
FIXPSC .COM	FIXCB .ASM
FIXFWII .COM	FIXQB .ASM
ZPC .ASM	FIXPSC .ASM
COND .ACM	FIXFWII .ASM
DATA .ACM	DEMO .ASM

**Author:** Patrick Swayne, HUG Software Engineer.

**ZPC.COM, ZPCSM.COM** — These are the two versions of ZPC. ZPCSM.COM is for small memory systems (less than 768k), and ZPC.COM is for 768k systems. ZPC emulates the color/graphics adapter, the monochrome text adapter, the keyboard, printer I/O and disk I/O of an IBM PC or compatible computer.

ZPC is a background program that remains resident in memory after you run it. Once it has been loaded, you can turn on PC emulation to run IBM programs, and turn it off to run Z-100 programs. You do not need a second version of MS-DOS to run IBM programs under ZPC, and all your drives and partitions are supported.

Some programs require patching before they will run under ZPC. A patching utility is included, along with patches for several programs. ZPC Version 2 fully supports the ZPC Hardware Support (ZHS) circuitry that was described in the April 1986 issue of REMark. With ZHS installed, most supported programs do not have to be patched.

ZPC Version 2 can read some, but not all, copy protected programs. In particular, it cannot read a disk protected by SoftGuard. Fortunately, there are commercial programs available that let you use SoftGuard protected programs.

The following is a list of programs that can have been tested under ZPC Version 2 (with 768k of memory), as of 3-18-86.

<b>Program:</b>	<b>See</b>
<b>Notes:</b>	<b>Notes:</b>
BENCHMARK Word Processor vers. 4.4	1
CORNERSTONE database	1
Compiled PC GW-BASIC Programs	1
Compiled QUICKBASIC Programs	5
DAC EASY ACCOUNTING	1
DBASE III version 1.1	2,3,4
DBASE III + version 1.0	2,3,4
EDIX version 2.05	2,3
EINSTEIN WRITER version 7.2	2,3
ENABLE version 1.1	2,3
FRAMEWORK version 1.1	2,3,4
FRAMEWORK II version 1.0	2,3,4,5
GW-BASIC (Zenith PC versions)	2,3
LOTUS 1-2-3 release 1A	2,3
LOTUS SYMPHONY	1,4
MICROSOFT WORD vers. 1.1 (Zenith PC)	2,3
MICROSOFT WORD version 2.0	1
MULTIMATE version 3.3	2,3
MULTIPLAN version 1.2 (Zenith PC)	2,3
NORTON UTILITIES	1
PC FILE	1
PC PALETTE version 1.0	3
PC WRITE version 2.4 or 2.55	3
PRINT MASTER	1
RUN/C	1
SIDEWAYS version 2.02	1
SUPERCALC3 version 2.0, 2.1	3
TURBO PASCAL	1
VOLKSWRITER DELUXE version 2.0	3
WORD FINDER	1
WORD PERFECT version 4.1	2,3

**Notes:**

1. Runs without any patches or hardware support.
2. Runs in the monochrome mode without any patches or hardware support.
3. Runs without patches if the ZPC Hardware Support circuitry is installed. Otherwise, you must use the patches supplied with ZPC.
4. Copy protection must be removed before you can run this program.
5. Requires a special patcher, supplied with ZPC.

**PC.COM** — This program is used to turn on the IBM emulation mode after ZPC is loaded into memory. With PC.COM on your system disk, you just enter

A>PC

to turn IBM emulation on. PC can also be used to set a specific video mode, much like the MODE program used on IBM PCs.

**Z100.COM** — This program is used to turn off the IBM emulation mode. With Z100.COM on your system disk, you enter

A>Z100

to enter normal Z-100 operation. You can then run your Z-100 programs as usual.

**SETZPC.COM** — This program is used to set several parameters, such as the way ZPC emulates bright colors, etc., and the default video mode (when you run PC). You can also specify the character font to be used when ZPC is in the IBM mode. You can choose from an IBM-style font, the default Z-100 font, or a user-supplied font (from a custom ALTCHAR.SYS). All changes made by SETZPC can be either temporary or permanent.

**ANSISYS.COM** — This program emulates the ANSISYS device driver that is used on PC-type computers. It will allow you to run programs that use ANSI codes.

**SETANSI.COM** — This program allows you to turn ANSI emulation on or off after you have loaded ANSISYS.

**PATCHER.COM** — This program is used to apply patches to programs that need them to run with ZPC. It is menu driven, and much easier to use than DEBUG. The patch information is stored in a data file, PATCHER.DAT, which is an ordinary text file that can be modified or added to using an editor or word processor. As patches for more programs are developed, they will be printed in REMark in PATCHER data file format.

**PATCHER.DAT** — The patcher data file. It contains patches for all programs in the list above that have a 3 in the note column.

**FIXCB.COM** — This program fixes compiled PC GW-BASIC programs so that they will run with the small memory version of ZPC. Patching is not needed if you have 768k of memory.

**FIXQB.COM** — This program fixes compiled QuickBASIC programs so that they will run with ZPC. It is for stand-alone programs, compiled using the /O option.

**FIXPSC.COM** — This program fixes Heath/Zenith and Clarkston screen printing utilities (Z-100 versions) so they can be used to dump graphic displays to a printer while ZPC is in the IBM mode.

**FIXFWII.COM** — This program applies a special patch to Framework II that cannot be done with PATCHER, to make it work with ZPC.

**DEMO.COM** — A program that demonstrates ZPC.

**\*.ASM, \*.ACM** — These are the source code files for ZPC and its support programs.

**TABLE C Rating:** (2), (7), (10)

=====  
**P/N 885-3038-37**  
**Z-DOS/MS-DOS**  
**DEBUG Support Utilities**  
 =====

**Introduction:** This disk contains three utilities designed to help you with debugging programs. They are designed to be used with the standard MS-DOS DEBUG utility or other similar utilities. The three utilities are:

**Processor Window** — This utility allows you to "look inside" your microprocessor in your computer while it is running. It will display any two 16-bit registers, any two 16-bit memory locations, or one register and one memory location on the screen in the upper right corner, while any program is running. You can use this utility to see how a program alters an interrupt vector, where it gets "stuck" in an endless loop, and for many other purposes. This utility was developed and used to debug ZPC, and get PC programs running under it. It works with or without DEBUG.

**Breakout** — This utility allows you to run a program under DEBUG, and then break out of the program back into DEBUG even though you have not hit or even set a breakpoint. It allows you to get out of endless loops or "runaway" programs.

**Anti-Paranoid** — This utility allows you to debug "paranoid" commercial programs that otherwise cannot be debugged because they destroy the breakpoint interrupt. Two versions of this utility are included, which take two different approaches to solving the "paranoid program" problem.

**Requirements:** You will need an H/Z-100 or H/Z-100 PC series computer, any version of MS-DOS or Z-DOS, and the DEBUG utility that came with your DOS, or another debugging utility. The second version of ANTI-PARANOID requires 512k of RAM, but the other utilities will work in a minimum (128k) system.

Here is a list of the files on the DEBUG Support Utilities disk:

README	.DOC	APNOID2	.COM
PWINDOW	.POM	APSET2	.BAT
PWINDOW	.ZOM	PWINDOW	.PSM
PW	.COM	PWINDOW	.ZSM
BRKOUT	.POM	PW	.ASM
BRKOUT	.ZOM	BRKOUT	.PSM
BRK	.COM	BRKOUT	.ZSM
APNOID	.COM	BRK	.ASM
APSETP	.COM	APNOID	.ASM
APSET	.BAT	APSETP	.ASM
APSET	.DAT	APNOID2	.ASM

**Author:** Patrick Swayne, HUG Software Engineer

**PWINDOW.POM, PWINDOW.ZOM** — These are two versions of ProcessorWindow, for PC or Z-100 type computers. You must rename the extension of the version you use to .COM before you can run it. PWINDOW remains resident in memory, and is controlled by the PW program, described below, once it has been installed.

**PW.COM** — This program is used to "open" or "close" the processor window, and to set what it will display on the screen. For example, to display the values of the CS and IP registers on the screen, you would enter

PW CS,IP

The actual display is in the form nnnn:nnnn, where nnnn represents a hexadecimal number.

**BRKOUT.POM, BRKOUT.ZOM** — These are two versions of Breakout, for PC or Z-100 type computers. You must rename the

extension of the version you use to .COM before you can run it. BRKOUT is a memory resident program. While it is loaded and active, you can break out of the program you are debugging by pressing a special key sequence. It will not break out if it detects that a DOS function is being executed at the time you press the key sequence, to protect the operating system.

**BRK.COM** — This program is used to enable or disable BRKOUT, once it has been installed.

**APNOID.COM** — This is the first version of Anti-Paranoid. It works by capturing nearly every interrupt vector, and fixing the breakpoint and single step interrupt vectors during each interrupt. The captured interrupts are passed through unchanged. APNOID is a memory resident utility.

**APSETP.COM, APSET.BAT, APSET.DAT** — These files are used to set up APNOID before each debugging session. They make sure that it restores the breakpoint and single step interrupts correctly. The batch file, APSET.BAT, controls everything else.

**APNOID2.COM** — This is the second version of Anti-Paranoid. Some programs will not run if they detect that the breakpoint interrupt has been fixed. They usually clear the breakpoint vector to all zeros, so APNOID2 places a jump at 0:0 that eventually gets to the breakpoint routine. Some Microsoft programs clear the breakpoint vector to 4E4E:4E4E, so APNOID2 places a vector there, too, if it detects enough free memory. The single step vector is not protected by this version, and the divide-by-zero interrupt is destroyed by the jump placed at 0:0.

**APSET2.BAT** — This runs APNOID2.COM under the control of DEBUG, so that the vectors are set properly.

**\*.ASM, \*.PSM, \*.ZSM** — Assembly source code for the DEBUG Support Utilities programs.

=====  
**P/N 885-3039-37**  
**HelpScreen**  
 =====

**Introduction:** HelpScreen is a program to create and place in upper video RAM on the H/Z-100 (not PC) computer, useful, user-generated help messages. These messages (help screens) can be requested at any time during the execution of a piece of software.

**Requirements:** HelpScreen requires 64k video chips and version 2.5 or higher Monitor ROM on an H/Z-100 (not PC). It will run under Z-DOS (MS-DOS ver. 1), or any version of MS-DOS.

The files included on this disk are:

HELPSCRN	.ASM	- Source code for the program
HELPSCRN	.COM	- Executable program
SAMPLE	.HLP	- Example "help screen" file
WORDSTAR	.HLP	- Wordstar "help-screen" file
ZPC	.HLP	- ZPC (PC emulator by Pat Swayne) "help screen" file
README	.DOC	- ASCII program documentation file

**Authors:** Dennis Myers and George Crawford

**Program Content:** HelpScreen is a program written to give users of the Zenith H/Z-100 (not PC) computer the ability to create their own "help screens" for any program they wish. The program consists of (1) a small text editor that allows the creation of a "help screen message", (2) a non-resident module that allows the "loading" of a "help screen message" into video RAM, and (3) a resident module that "toggles" video memory whenever the appropriate "toggle key" (either the HELP or SHIFT-HELP) is struck. When this toggle occurs, the program in execution is "interrupted", and the help screen message is instantaneously displayed. When the toggle key is again struck, the interrupted program resumes EXACTLY where it was interrupted from.

**Comments:** Excellent for complex programs having hundreds of commands (like Wordstar) that you know exist, but don't feel like looking up in the manual.

**TABLE C Rating:** (9)

=====  
**P/N 885-3040-37**  
**HADES**  
 =====

**Introduction:** HADES is an acronym for Hug's Absolute Disk Editing System. In short, HADES is a screen oriented byte (or disk) editor with file recovery and attribute modifying capabilities.

**Requirements:** HADES requires MS-DOS version 2.0 or greater on any Heath/Zenith 16 bit computer with at least 128k of RAM. These systems include: H/Z-100, 110, 120, 130, 140, 150, 160, 170, 180, and 200 series of computers. HADES will also work with the IBM PC, XT, and AT.

The following files are included on the HUG 885-3040-37 HADES disk:

README	.DOC	- Preliminary information and disclaimer.
DHADES	.EXE	- Demo/Non-Destructive version of HADES.
HADES	.EXE	- Full implementation version.

Also included with this software, is an extensive users manual.

**Author:** Jim Buszkiewicz (Heath Users' Group)

**Program Content:** HADES is a program that gives the MS-DOS user, almost total control over the data residing on his disk. In addition, file attributes can be displayed and modified (within the capabilities of MS-DOS). Finally, the software has the ability to recover any file or sub-directory that's been accidentally erased (providing no other disk writes have occurred since the erasure).

When HADES first signs on, the main menu is displayed, and looks like the following:

```
F1 - Help
F2 - Directory Mode
F3 - Sector Mode
F4 - File Mode
F5 - Un-Erase Mode
F6 - Change Drives
F7 - Color/Monochrome
F9 - Exit To MS-DOS
```

Online help is always available, and can be called up by pressing the F1 function key.

The F2 enters the Directory Mode. From this mode, the user can view all the files (one page at a time), on his currently logged directory, along with each files' attributes. These include: <R>ead Only, <H>idden, <S>ystem, <A>rchive, and <D>irectory. Each file can have its attributes changed or removed including hidden sub-directories! The user can also change directories from this mode.

The F3 key enters the Sector Mode. This mode gives the user a 128 byte window into each sector on his disk. This window can be moved anywhere within the sector, as well as to any sector or cluster. Any byte in any DOS accessible sector can be viewed, modified, and then permanently recorded on disk! Data can be entered in hex or ascii. The entire disk can be searched for strings of hex or ascii data. Once found, the same string can be searched for again from the current disk position. Finally, the currently viewed sector can be displayed on any listing device. In this sector mode, the keypad keys act as your 'steering wheel' to all the data on your disk. On the H/Z-100 (Not PC), not only are the cursor and HOME keys active, but the rest of the keypad acts in the same manner as the keypad on the PC series of computers, allowing both systems to be operated in an identical fashion.

The F4 key enters the file mode of operation. The name of an existing file must be entered before HADES allows this mode to continue. Once found (in the currently logged directory), each cluster of the file is displayed, in the same manner individual sectors are. Any byte, in any of the file's clusters, can be viewed, modified, and then permanently recorded back on disk. HADES always displays the current cluster, along with the next eight clusters (if the file is that long) of the file. As the user moves through each cluster, the cluster list is updated in ticker-tape fashion. No other sectors or clusters can be viewed or modified except those contained in the original requested file. Like in the Sector Mode, you can search for strings of either hex or ascii data. Only each cluster in the file itself will be searched for this data.

The F5 key allows the user to recover a file or sub-directory that's been accidentally erased. The file recovery is done automatically, and two important conditions must be met before a successful recovery can be made.

1. The file being recovered must be the LAST file to have been erased on the disk.
2. After the actual file erasure, no disk writes should have occurred.

The file recovery method used, is called a 'blind search'. HADES uses the first cluster pointer in the directory entry into the FAT. From there, free clusters are allocated sequentially to the lost file until the file size is satisfied.

The F6 key allows the user to log into a different drive. This function allows HADES to record all the necessary parameters of the drive being used.

The F7 key toggles between a white on black monochrome display and a white on blue with gray border color display.

The F9 key returns you safely to the MS-DOS operating system. This is the only SAFE way to exit other than a cold boot.

**Comments:** The abilities of HADES have been tested on virtually every Zenith 16 bit computer and drive combination including the H/Z-100 with 8" single density single-sided drives, as well as the new Z-181 with new 3" drives. HADES has yet to fail!! In the hands of an experienced MS-DOS user, HADES can be a very powerful tool. To the beginner, HADES is a window to the secrets of disk formats and file structures. Even if you never use HADES for anything other than to recover a single file, the day you see that file magically return to the world of the living, you'll say "...thank Heaven for HADES!"

**TABLE C Rating:** 10

## P/N 885-3041-37 SCREENDUMP

**Introduction:** SCDMP is a utility that allows reproduction of a complete video screen on a dot matrix printer, including both text and graphics, without having to exit the current program. The SCDMP program may be loaded manually (by entering SCDMP <cr>) or automatically, via 'autoexec.bat', into memory at the beginning of a session where it remains resident until needed. This version of SCDMP is a update to and supersedes the version released on HUG P/N 885-3022-37, ZDOS/MSDOS Useful Programs I. Versions for both the Z-100 and Z-150 (IBM PC and most compatibles) are included. Additional features have been added to the programs which provide greater screen dump flexibility. A summary of the new features are as follows:

### For Z-100

- Dumps ALL VRAM banks (everything on screen regardless of color), as well as choice of red, green, or blue.
- Dumps TEXT only (similar to PSC.COM).

### For Z-150

- Dumps GRAPHICS (must be in graphics mode) or TEXT (even if in graphics mode).
- Version for ZPC on the Z-100 (all Z-150 features supported) or both.
- Dump either a positive or negative image of screen.
- Higher density dump supported on all printers.
- Dump either a 24 or 25 line screen.
- Change default settings by the command line on initial entry or via SHIFT-F12/SHIFT-PrtSc.
- Print out current default settings any time desired.
- More printers supported (C. Itoh, Epson, Gemini, IBM, MPI, NEC, Anadex, and IDS) (Versions in preparation for the Epson, Toshiba, and other 24 pin printers).

- Sample routines to call from within your own program. See the documentation file (SCDMP.DOC) for complete description of features and instructions for use.

**Requirements:** This program requires MSDOS operating system (Version 1.1 or higher) on an H/Z-100 or H/Z-150 computer. The printers currently supported are the C. Itoh 8510/1550 Series with 2K buffer, NEC 8023A, Epson MX/RX/FX Series with Graftrax, Star Micronics Gemini Series, Okidata Microline Series, Zenith/MPI 99/150 Series, Anadex Silent Scribe Series, IBM Proprinter, and IDS Paper Tiger printers.

The following files are included on the HUG P/N 3041-37 SCREENDUMP disk:

README	.DOC	Initial startup info and disclaimer
SCDMP	.DOC	Screen Dump information
SCDMPCIT	.100	Z-100 Vers for C. Itoh 8510/1550
SCDMPCIT	.150	Z-150 Vers for C. Itoh 8510/1550
SCDMPCIT	.ZPC	Z-100 ZPC Version for C. Itoh 8510/1550
SCDMPNEC	.100	Z-100 Version for NEC 8023A
SCDMPNEC	.150	Z-150 Version for NEC 8023A

SCDMPNEC	.ZPC	Z-100 ZPC Version for NEC 8023A
SCDMPCIT	.ASM	Source for C. Itoh 8510/1550 and NEC 8023A
SCDMPEPS	.100	Z-100 Version for Epson MX/RX/FX
SCDMPEPS	.150	Z-150 Version for Epson MX/RX/FX
SCDMPEPS	.ZPC	Z-100 ZPC Version for Epson MX/RX/FX
SCDMPIBM	.100	Z-100 Version for IBM Proprinter
SCDMPIBM	.150	Z-150 Version for IBM Proprinter
SCDMPIBM	.ZPC	Z-100 ZPC Vers for IBM Proprinter
SCDMPEPS	.ASM	Source for Epson MX/RX/FX and IBM Proprinter
SCDMPGEM	.100	Z-100 Version for Star Micronics Gemini
SCDMPGEM	.150	Z-150 Version for Star Micronics Gemini
SCDMPGEM	.ZPC	Z-100 ZPC Vers for Star Micronics Gemini
SCDMPGMX	.100	Z-100 Vers for Star Micronics Gemini 10X
SCDMPGMX	.150	Z-150 Vers for Star Micronics Gemini 10X
SCDMPGMX	.ZPC	Z-100 ZPC Vers for Star Micronics Gemini 10X
SCDMPGEM	.ASM	Source for Star Micronics Gemini Series
SCDMPOKI	.100	Z-100 Vers for Okidata Microline
SCDMPOKI	.150	Z-150 Vers for Okidata Microline
SCDMPOKI	.ZPC	Z-100 ZPC Version for Okidata Microline
SCDMPOKI	.ASM	Source for Okidata Microline
SCDMPMPI	.100	Z-100 Vers for Zenith/MPI 99/150
SCDMPMPI	.150	Z-150 Vers for Zenith/MPI 99/150
SCDMPMPI	.ZPC	Z-100 ZPC Version for Zenith/MPI 99/150
SCDMPMPI	.ASM	Source for Zenith/MPI 99/150
SCDMPANA	.100	Z-100 Vers for Anadex Silent Scribe
SCDMPANA	.150	Z-150 Vers for Anadex Silent Scribe
SCDMPANA	.ZPC	Z-100 ZPC Vers for Anadex Silent Scribe
SCDMPANA	.ASM	Source for Anadex Silent Scribe
SCDMPIDS	.100	Z-100 Version for IDS Paper Tiger
SCDMPIDS	.150	Z-150 Version for IDS Paper Tiger
SCDMPIDS	.ZPC	Z-100 ZPC Vers for IDS Paper Tiger
SCDMPIDS	.ASM	Source for IDS Paper Tiger
SCDMP-RL	.SKL	Skeleton vers for use in building a program for your unique printer or application
SCDMP-LR	.SKL	for your unique printer or application
SCDMP	.BAT	Batch file for auto load of SCDMP.COM (rename the appropriate program to SCDMP.COM)
INT5	.BAS	Sample BASIC program to call int-5
INT5	.ASM	Assembly subroutine for above
INT5	.BIN	Assembled subroutine for call from BASIC
CINT5	.BAS	Sample BASIC program for Compiler to call int-5
CINT5	.ASM	Assembly subroutine for above
CINT5	.OBJ	Object file for linking with Compiled BASIC

**Program Author:** Leslie L. Bordelon

**Operation:** For the Z-100, the program allows a choice of which color bank of video RAM is dumped (if the user has all banks of color RAM in his Z-100). The number of VRAM banks installed in your computer is determined by SCDMP upon initial load. For the color version, entering a <B> for blue, <R> for red, <G> for green, or <A> for all banks immediately after the <SHIFT-F12> will select the VRAM bank to be printed. If no character is entered, <A>ll banks is the default. If only one bank of color RAM is installed, only the green bank can be dumped. Entering a <T> will cause only the text on the screen to be dumped unformatted to the printer.

For the Z-150, you can option to print only text, even if in the graphics mode, by entering a <T> for text immediately after the <SHIFT-PrtSc>. However, if in the Z-150 text mode (modes 0, 1, 2, or 3) then only screen text can be dumped (using the ROM text dump), even if SCDMP is set for graphics dump.

The program allows the printing of the screen image as either a positive or negative. Entering a <P> for positive or <N> for negative after the <SHIFT-F12> or <SHIFT-PrtSc> will change the image printed. When set to negative image, text on a black

background is printed as black on white. This is the default setting for SCDMP. A positive image would appear as white text on a black background. This provides some additional flexibility when printing complicated artwork using various shades of colors.

The program also allows multiple density printing. This is accomplished by using a higher dot density in graphics mode if the printer supports such. For those printers that do not, high density is achieved by overprinting each line a second time. Entering an <H> immediately after the <SHIFT-F12> for Z-100 or <SHIFT-PrtSc> for Z-150 or color selection would cause the printer to use a higher density mode for printing. The default density is normal or standard density.

The program also allows a choice of printing the twenty-fifth line (only if displayed for the Z-100). Entering a <D> immediately after the <SHIFT-F12> for Z-100 or <SHIFT-PrtSc> for Z-150 or color or density selection will cause SCDMP to ignore the 25th line even if it is displayed.

Two skeleton versions of the program are also provided as an aid in building a program for a non-supported printer. The skeleton versions present an outline for both options of scanning the Z-100/Z-150 screen depending on your specific type of printer. With this data and a little trial and error on the user's part, a successful product for a unique printer can be developed.

Comments: none

## 885-3042-37

### See Page 26

## P/N 885-6002-37 MS-DOS CP/EMulator II & ZEMulator Update

CP/EMulator II is a program that allows you to run CP/M programs under MS-DOS on an IBM-PC compatible computer, such as the H/Z-150 series, etc. ZEMulator is a program that emulates the Z-100's function keys and escape codes. They have been improved considerably and re-released under the same HUG part number. For a description of the original program, see page 42 of your HUG Software Catalog Update #1. CP/EMulator II has been improved in the following ways:

- Support of the V20. If you have a V20 processor in your computer, CP/EMulator II will use it to execute the 8-bit code in CP/M programs, which will cause them to run much faster. If you do not have a V20, CP/EMulator II will emulate the 8-bit code itself. It automatically detects the V20 and uses it, if one is installed.
- Faster screen output. Whether you have a V20 or not, CP/EMulator II will be faster than before, because screen output has been speeded up.
- Runs more programs. CP/EMulator II has been improved to run more CP/M programs, including WordStar (all functions), PIP (all switches), and ED.

ZEMulator has been improved to include a special graphics mode that provides all H19 graphics characters for use on the newer Heath/Zenith computers, that do not have the graphics characters built-in. For older H/Z PCs, such as the H/Z-150 series, the built-in H19 characters can still be used.

In addition to the above improvements, the CP/EMulator II and ZEMulator disk comes with two new programs that were not on the original disk. These programs were designed for the H-8 or H-89 CP/M user who also has a PC-compatible computer.

**HRDCPM** — This program works like the RDCPM program included with your Heath/Zenith MS-DOS, but it can read H-89 or H-8 format double-density, 48 tpi, single- or double-sided, soft-sector disks, as well as Z-100 CP/M disks. The Heath/Zenith RDCPM program for PC compatibles can read Z-100 disks and IBM CP/M-86 disks, but not H-89 disks. **Note:** HRDCPM cannot read SINGLE-DENSITY, soft-sector disks or hard-sector disks, because the PC disk controller is incapable of reading such disks.

**TF89** — This program allows you to connect your Heath/Zenith PC and your H-8 or H-89 together with a serial cable, and transfer CP/M files from the H-8 or H-89 to the PC. PIP is used on the H-8 or H-89 to send the file, and TF89 receives it and saves it on your MS-DOS disk. The transfer rate is 9600 baud, and any file (text or machine code) can be transferred. If your H-8 or H-89 cannot produce a disk format that HRDCPM can read, you can still transfer files using TF89.

If you have the original CP/EMulator II and ZEMulator disk; and would like to upgrade, send in your original HUG disk and \$5.00 to Heath/Zenith Users' Group, Attn: Nancy Strunk, Hilltop Road, St. Joseph, MI 49085. Make checks payable to: Heath/Zenith Users' Group.

## P/N 885-6008-37 MSDOS NAVPROG

**Introduction:** NAVPROGseven is a database management system designed for pilots flying cross-country. The system is built around a latitude/longitude referenced navigation program designed to prepare a flight log that is ready for use in the cockpit. It is equally adaptable to the needs of VFR and IFR flight.

The system stores performance data for each aircraft the user files, navigation data about each checkpoint, airport, or navaid the user files over, and saves this information for easy access on subsequent flights.

**Requirements:** This version of NAVPROGseven is designed to run on the MSDOS operating system version 2.0 or greater on the H/Z-100 PC with at least 64k of memory. NAVPROGseven requires a dual-disk drive system and a line printer. The programs are written under and requires the Microsoft GW-BASIC version 1.0+.

The following files are included on the distribution disk 885-6008-37:

NAVPROG7 .BAS	DISKAID .DAT
DISKBID .DAT	MENU .BAS
AIRINPLUT .BAS	AIRCRAFT .BAS
AIRROUTE .BAS	OLDROUTE .BAS
RNAVREF .BAS	AIRALPHA .BAS
AUTONAV .BAS	N73116
N81259	AIRINDEX .RND
AIRPORTS .RND	ROUTINGS .DAT
RNAVLIST .DAT	BEH .LUK
LUK .BEH	README .DOC

**Program Authors:** Originally written by Alan Bose for use on the H-89 under HDOS. An update for CP/M was prepared by Glen Hassebrock Jr. This version was adapted for the PC by Pe' Ambrose.

**Files:** The main program content will be described below. The following is a brief description of the data files used by NAVPROGseven:

**N73116 and N81259** — These files are sample aircraft data, which may be deleted manually or by the program after the user has experimented with NAVPROGseven.

**AIRINDEX.RND and AIRPORTS.RND** — These data files contain over 100 checkpoints already on file. These files can be revised from within NAVPROGseven or the user can delete them and start over with his own data.

**RNAVLIST.DAT** — This file saves the fixes or checkpoints that have RNAV cross-bearings.

**ROUTINGS.DAT** — This file contains a sample index of routes on file. This file will be updated through the program.

**BEH.LUK and LUK.BEH** — These data files are sample routes on file.

**Program Content:** The title of NAVPROGseven comes from the features and functions designed into the system, many of which are not found in similar programs.

1. Easy input & revision of the airport/navaid database.
2. Two RNAV (area navigation) functions that return the latitude and longitude of a location based on cross-bearings from known points.
3. Aircraft performance data stored for each airplane you fly.
4. Easy access and display of airport and checkpoint information using standard ICAO identifiers as you plan your route of flight. Automatic flight planning selects nav aids closest to your great circle route and prepares several alternate routings. Often flown routes can be saved for later use.
5. Great circle navigation between checkpoints using aircraft performance data, and printout of ready-to-use flight log.
6. Climb/descent profiles calculated based on aircraft performance data.

7. Multiple sort criteria to organize airport/navaid data into easy-to-read printouts.

The comprehensive flight log tells the field elevation of the departure and destination airports, navaid frequencies enroute, distances for each leg and total remaining, true and magnetic course, magnetic heading corrected for wind and magnetic compass variation, groundspeed corrected for wind and climb and/or cruise leg segments, ETE and ETA for each leg, fuel usage based on climb and/or cruise with startup/taxi/takeoff fuel accounted for, fuel remaining, and a warning if reserves will be less than IFR or VFR minimums.

In addition, a synopsis of the flight tells the fuel used, reserves in gallons and time, fuel/time/distance required to climb, how far out from the destination the user should begin his descent to maintain a 2 degree descent profile.

**Master Menu:** There are eight programs called by six user selectable items on the master menu. The master menu includes the following options:

- \* Input/Revise Airport and Navaid Data
- \* Input Aircraft Performance Data
- \* Automatic Route Preparation
- \* Air Navigation and Flight Planning
- \* Navigate Pre-Planned Route
- \* Sort & List Data on File

These options provide a complete capability for using the stored information to plan flights, prepare comprehensive flight logs for in-flight use, add new data to the database and to maintain the accuracy of the database.

**Comments:** NAVPROGseven was written for aircraft navigation but is not limited to pilots alone. The great-circle navigation and radio-beacon cross-bearings can be helpful to sailors who also have a need to navigate efficiently, though at a slower pace. The system is menu-driven and includes all necessary documentation for use. The programs are self-prompting with one-key responses and many safety checks that allow the user to go back to the menu and start over.

As mentioned above, the programs come with sample data that allows the pilot to 'test-fly' the system before creating his own database, and there are over 100 airports and nav aids already on file that will get the pilot off to a running start.

TABLE C Rating: (10)

## NAVPROGseven Update

HUG P/N 885-6008-37, NAVPROGseven for the H/Z-150, has been updated, by the author, to NAVPROGeight. This latest version has a new feature which performs the weight and balance calculations for the aircraft. Only this newest version will be shipped when ordering.

## P/N 885-6009-37 MS-DOS Screen Saver Plus

**Introduction:** This disk contains four MS-DOS utilities for the H/Z-100 PC computer systems: ScreenSaver, DualScreen, ChangeSpeed, and a Print Screen utility for Text Modes.

**Requirements:** All four programs require MS-DOS version 2.0 or greater, and a minimum amount of memory. The ChangeSpeed utility is specifically for the H/Z-200 computer system, while the other three, will run on any H/Z-150/160/200 or IBM compatible. CS, requires that both the Z-309/409 color graphics card and the Z-329 high resolution monochrome card be installed in the computer system, as well as a monitor be connected to both cards.

The following files are included on the HUG P/N 885-6009-37 Screen Saver Plus disk:

SS .ASM	SS .COM
DS .ASM	DS .COM
CS .ASM	CS .COM
PSCTM .ASM	PSCTM .COM
README .DOC	

**Authors:** SS, DS, and CS, by Jim Buszkiewicz, PSCTM by Pat Swayne.

**SS (ScreenSaver)** is a program specifically for the H/Z-100 PC series of computers (H/Z-150/160/200) or IBM compatible. SS

will, after a predetermined length of time of screen and keyboard inactivity, blank the color graphics screen or high resolution monochrome graphics screen, eliminating the possibility of 'burned' phosphor on the CRT. Upon any key entry, or any screen activity, the original screen information will be restored and updated. ScreenSaver works in all video modes except 4 and 5 (medium resolution color graphics mode), which is normally used for game playing. ScreenSaver can be set for any length of time between 1 and 60 minutes of delay before blanking the screen because of inactivity.

**DS (DualScreen)** is a utility that allows any text that appears on the color graphics screen, to appear on the Z-329 high resolution monochrome screen. This eliminates the need for changing video modes when doing word processing or editing. The 'action' of this program can be turned 'on' and 'off' at will, once it has been installed in memory. Take note that, due to the time needed to refresh the video screen, this utility will not work simultaneously with modem communication packages.

**CS (ChangeSpeed)** is a utility for the H/Z-241 series of computers. It is also the same program that appeared on page 50 of the March 1986 issue of REMark magazine. This utility takes advantage of an undocumented feature of the '241, and allows the user to change the speed of the computer to that of a standard 5 Mhz H/Z-150/160, and then back again to the computer's normal speed at will.

**PSCTM (Print Screen utility for Text Modes)** is designed to be used in conjunction with a graphic PSC (Print Screen) utility, to allow it to work in the text modes. It allows you to print a duplicate of what is on the screen, including text mode graphic characters and special symbols. It works with any printer for which you have a graphic print screen utility.

#### TABLE C Rating: (10)

## P/N 885-8035-37 MS-DOS Documat & Doculist UPDATE

This popular Word Processor/Text Formatter is being re-released under the same part number 885-8035-37, and will now work with either the H/Z-100 or H/Z-100/200 PC computer systems. This latest version, 2.1, now includes the following enhancements:

1. Macros can now be longer than 256 characters.
2. Full MS-DOS path names are now permitted.
3. Proper operation with RAM drives and windowing software.
4. Output from DOCULIST can now be sent to a file.

For a more complete description of this product, see page 60 of the HUG Software UPDATE catalog, or issue 70 (Nov. '85) of REMark.

## P/N 885-8038-37 MSDOS RF-CAD Ver. 3.50

**Introduction:** RFCAD is an integrated collection of programs written in BASIC which will aid the user in designing many types of electronic circuits and antennas. This package should be invaluable to radio amateurs, electronic engineers, or anyone who has occasion to design circuitry or antennas for RF or Microwave frequencies. It is particularly useful to persons interested in satellite earth station design and construction, and also those who wish to purchase a ready made earth station. RFCAD is also useful as an instruction aid in teaching electronic theory. The user is free to experiment with various configurations and values without having to build the circuit to determine the results.

**Requirements:** RFCAD requires an H/Z-100 PC/200 PC system with a minimum (128k) amount of memory. A single 5-1/4" disk drive is required, and an 80 column printer is optional. Any version of MSDOS and Microsoft's BASIC is also needed.

In addition to the printed users' manual that comes with this product, the following programs or files are included on this HUG RFCAD disk P/N 885-8038-37:

AELIPT	.BAS	AFILTER	.BAS
AFLOT	.BAS	BFILTER	.BAS
CADMENU	.BAS	CHORN	.BAS
COIL	.BAS	CONFIG	.BAS
DBCONV	.BAS	DISH	.BAS
EME	.BAS	EQUALZ	.BAS
FED	.BAS	FREQWAV	.BAS
HELIX	.BAS	HELP	.BAS
HORN	.BAS	LHFILTER	.BAS
LPI	.BAS	MATCHER	.BAS
MFILTER	.BAS	MOD	.BAS
MSCONV	.BAS	MSTRIP	.BAS
NE555	.BAS	NFCNV	.BAS
OSC	.BAS	PATH	.BAS
PELPT	.BAS	PFILTER	.BAS
README	.DOC	RESNET	.BAS
RESONNCE	.BAS	SATANT	.BAS
SPUR	.BAS	TUNE	.BAS
WDLTD	.BAS	YAGI	.BAS
ZCONV	.BAS		

Program Author: Gary A. Field

**Program Content:** Ease of use is one of RFCAD's primary features. Wherever possible, the user is presented with menus of choices and examples of input data being requested. Since full source code is provided, the user may if he wishes, modify any of the programs to suit his own needs.

The designs covered by this package have been selected based mainly on needs of the author. Whenever the need to design a circuit involving extensive calculation arose, a program was written to perform the necessary task. After a large number of functions were available, a menu driver was created to make access to all the functions simpler and more uniform. The entire set of programs was written in the simplest form of BASIC with particular attention to readability and maintainability, so that the user can modify it for his own use.

The information required to perform the calculations was obtained from a great many sources; magazine articles, textbooks, papers and verbal information from friends (Joe Reiser - W1JR and Peter Reilly - KA1LAT). The particular source is listed in the program listing. Any formulas or algorithms not credited in this manner were derived by the author or taken from his own memory.

Upon execution of the program, the following menu of design aids is available:

- (1) Low Frequency circuit design
- (2) High Frequency circuit design
- (3) UHF and Microwave circuit design
- (4) Antenna and Transmission line design
- (5) Filter design
- (6) Space Communications Aids
- (7) Miscellaneous conversions
- (8) Strays
- (9) Help
- (10) Return to O/S

Included with the documentation are schematics of various design aids, which are referenced by the actual program itself.

TABLE C Rating: (10)

## P/N 885-8039-37 MS-DOS DPATH

**Introduction:** DPATH is an MS-DOS utility which provides a data directory path search facility. Once loaded into memory, DPATH remains resident, and provides directory searching for data and overlay files in much the same way that the MS-DOS 'PATH' command causes searches for executable files.

**Requirements:** DPATH was designed for use on a Z-100 computer running MS-DOS version 2, but can be easily modified for use on any machine running MS-DOS version 2 or MS-DOS version 3. A version is supplied for use on Z-100 PC systems, and any other PC, XT or AT compatible.

The following files are included on this distribution disk:

DPATH	.COM	Z-100 version of DPATH
DPATHPC	.COM	Z-100 PC version of DPATH
DPATH	.DOC	Documentation file
DPATH	.ASM	Assembler source for DPATH
STRUCT	.ASM	Structure macros for DPATH.ASM
README	.DOC	Startup info

Program Author: Gordon Buchanan

**DPATH.COM** — An MS-DOS utility program that can help you to organize data and programs within the MS-DOS hierarchical file structure. DPATH searches for data files and program overlays in much the same way that the MS-DOS PATH command searches for executable command files. Once loaded into memory, DPATH becomes part of DOS and provides a directory search facility that is available to all subsequently executed programs.

When DPATH is used in conjunction with the PATH command, all programs, program overlays, device drivers, configuration files, global databases, help files, etc., can be stored in one or more user defined "system" directories, and removed completely from all application directories. The files in your system directories will be accessible from anywhere in the hierarchical file structure. The following benefits are thus gained.

- Better organized file structure, resulting in fewer files in application directories, and making it easier to find information on a disk.
- More free disk space because copies of programs and associated files are not needed in each application directory.

**DPATH.DOC** — Documentation for DPATH suitable for output on a printer. Includes information on the internal operations of DPATH and tells how to modify the program for use on different MS-DOS computers.

**DPATH.ASM** — Assembler source code for DPATH, using the MS-DOS assembler. Well documented, and written in a structured manner.

**STRUCT.ASM** — A set of macros which are required to assemble DPATH.ASM. These macros provide a set of coding structures for the MS-DOS assembler programmer. Includes WHILE-ENDW, REPEAT-UNTIL and IF-ELSE-ENDIF, which are completely nestable.

**Comments:** This program provides a facility which should have been built into DOS. A must for the hard disk user.

TABLE C Rating: (10)

## P/N 885-8040-37 MS-DOS HELP

**Introduction:** This package provides a comprehensive interactive HELP facility for Zenith Data Systems' implementation of both Version 2 and 3 of the Microsoft Disk Operating System (MS-DOS) for Zenith Z-100 series personal computers and IBM-PC compatible (Z-100 PC) personal computers.

The HELP programs and database files in this package allow quick and efficient access to complete MS-DOS command information which eliminates the need to have several manuals at the computer when command reference information is needed. The database files include all of the standard Zenith MS-DOS commands as documented in the Zenith MS-DOS manuals for both the Z-100 and Z-100 PC series computers, as well as the Zenith MS-DOS Programmer's Utility Package.

The database files are user extensible. The HELP programs and format of the database files were designed to be easily updated using a standard text editor. You can even create new HELP database files for your favorite word processor, modem communications program or programming language. Complete BASIC language source code is provided so that you can modify or enhance the programs as desired.

**Requirements:** An H/Z-100 series or H/Z-100 PC series personal computer and the MS-DOS operating system (either Version 2 or 3) are required. About 120k of disk space is required for the HELP program and database file, although the database file can be edited to reduce its size, if desired. The HELP programs require 128k bytes of memory. The HELP database can be modified using any standard text editor and the CNVT utility program provided. To modify the HELP programs, you must have either the Z-100 Z-BASIC compiler, or an IBM-PC compatible BASIC compiler.

The following files are included on this distribution disk:

README	.DOC	Documentation file for the HELP program
HELP100	.BAS	BASIC source code for Z-100 HELP program
HELP100	.EXE	executable version of Z-100 HELP program

HELPPC	.BAS	— BASIC source code for the Z-100 PC HELP program
HELPPC	.EXE	— executable version of Z-100 PC HELP program
CNVT	.BAS	— BASIC source code for data base conversion program
CNVT100	.EXE	— executable version of Z-100 conversion program
CNVTPC	.EXE	— executable version of Z-100 PC conversion program
HELPS	.DAT	— sequential HELP data base file
HELP	.DAT	— random access HELP data base file
SD100	.COM	— Z-100 sorted directory utility program
SDPC	.COM	— Z-100 PC sorted directory utility program
SD	.DOC	— documentation for sorted directory program

The sorted directory utility programs are provided strictly as a convenience to the user and are not required to use the HELP programs.

**Program Author:** John F. Stetson

**Program Content:** The HELP programs are designed to be easy to use and efficient in operation. The HELP database is a BASIC random-access file for high speed access, even on floppy based systems. Over 100 entries are presented using a full-screen HELP menu and may be easily selected using the keyboard arrow keys. The commands in the HELP database are divided into the following functional categories:

**Reference Commands** — General reference information for MS-DOS concepts and capabilities.

**Resident Commands** — Information for commands which are resident in memory.

**Resident Command Aliases** — Information for command aliases for the resident commands.

**Resident Batch Processing Commands** — Information for commands which are used in batch processing.

**Transient Commands** — Information for transient commands which are loaded and executed from disk.

**Transient Utilities** — Information for commands which are part of the Zenith MS-DOS Programmer's Utility Pack.

Once a command is selected, the following information is displayed:

**Command** — General information about the command: alias names; Z-100 vs. Z-100 PC; MS-DOS V2 vs. MS-DOS V3; etc.

**Function** — Brief description of the function or purpose of the command.

**Syntax** — Complete, detailed command line syntax of the command including all file names, option switches, etc.

**Examples** — One or more examples which illustrate typical uses of the command.

**Comments:** As the MS-DOS operating system has evolved, it has become more complex. In addition, most end-users are overwhelmed by the amount of documentation which accompanies the operating system. This package organizes this information and makes it available to end-users in a friendly and easily accessible environment. In addition, the package is both comprehensive and user-extensible, which make it valuable for more sophisticated users.

**TABLE C Rating:** (10)

=====  
**P/N 885-8041-37**  
**ORBITS**

**Introduction:** This software package called "Orbits", is a set of simulation programs which show what possible orbital paths look like and how satellites move while orbiting in these paths. Each colorful ellipse pattern that is created, with its moving satellites, has a beauty all its own. Now we can see the harmony of the spheres! This package was written (over a years period of time) to help students visualize the basic mathematical concepts involved in orbital mechanics.

**Requirements:** This package will run on an H/Z-100 with ZDOS/MSDOS version 1.25 or higher. The hardware also requires 192k of memory, as well as 64k color RAM chips installed on the video board. The monitor can be monochrome, but color displays are much easier to interpret. More than one disk drive will be useful for data storage, but is not required. Printing is optional; any print-

er will print the data tables, but an MPI 99 or compatible printer is required to use the included printscreen function.

The following programs are included on the HUG P/N 885-8041-37 ORBITS disks:

**Disk A**

ORBITS	.DOC	.ORMEC	.EXE
ORSYS	.EXE	SETUP	.EXE
SETUP	.FIL	ORBEND	.COM
README	.DOC		

**Disk B**

AMOR	.ORB	APOLLO	.ORB
DEMO10	.OSY	DEMO3	.OSY
DEMO4	.OSY	DEMO5	.OSY
DEMO6	.OSY	EARTH	.ORB
FAYE	.ORB	HALLEY	.ORB
HIDALGO	.ORB	JUPITER	.ORB
MARS	.ORB	MERCURY	.ORB
NEPTUNE	.ORB	ORBEND	.ASM
ORMEC	.BAS	ORSYS	.BAS
PLUTO	.ORB	SATURN	.ORB
SETLIP	.BAS	URANUS	.ORB
VENUS	.ORB		

**Program Author:** Larry MacNeil

**Program Content:** ORMEC was written to help people visualize the mathematical concepts presented in Kepler's Laws. Given any 2 out of 7 elliptical parameters that describe an orbital path (semi-major axis, semi-minor axis, linear eccentricity, semi-latus rectum, eccentricity, radius at perigee, radius at apogee), the program solves for the other 5 parameters. If the central mass is also given, the program will solve for the velocities of a satellite at apogee and perigee, and for the period of the orbit. Then, colorful graphic displays, in high resolution, 640 x 480 interlace mode using Z-GRAPH-100 subroutines, show the constructed orbital path ellipse, the area of the ellipse divided into equal areas with an integration routine, and a satellite orbiting with a velocity directly proportional to its true velocity. The parameters can be saved in a file for later use in developing an orbital system with ORSYS.

ORSYS will combine the files created in ORMEC to construct a system of up to 10 satellites orbiting around a common central mass. The angle of perigee and the starting point may be specified for each orbit. A system can also be saved as a file, so reviewing a system is easy. The data tables can be viewed on the screen and printed out to a draft printer. The program uses a number of matrix operations to scale and rotate the orbital paths. The graphic displays, again in interlace mode, show dashed and colored ellipses for each orbital path, so the paths may be distinguished on either a color or monochrome monitor. A zooming feature allows the user to choose the orbit that is shown, full scale. The satellites can be viewed with or without the ellipses on the screen, and the overall speed of the satellites can be varied for different effects. The velocity variations (accelerations) in each orbit and the relative velocities of different orbits can easily be seen. Some sample orbit and system files are included for initial demonstration purposes.

Both programs are compiled ZBASIC programs, so they run fairly quickly. The displays are of the ecliptic plane and do not take into account orbits that go out of the ecliptic. It is assumed that the central mass is spherical and enormously larger than the mass of the satellites, and that the satellites themselves are small enough so they do not collide or affect each other's orbital paths. Thus, it is assumed that the gravitational field of the central mass exerts the only force in effect and has an inverse square relationship. The orbits are, therefore, re-entrant (stable). This is close enough to reality to simulate many known orbits and allow the user to ask "What if..." questions. Extensive error handling and correction techniques are employed.

**Comments:** The author of this package is a senior physics major at San Jose State University, and has spent many hours in developing this software. This software is intended for the serious minded individual or student involved with the concepts of Astronomy and Kepler's Laws.

**TABLE C Rating:** (10)

=====  
**P/N 885-8042-37**  
**Poker Party**

**Introduction:** For lighthouse keepers, military personnel on solitary assignments, confirmed bachelors, and anyone else who

hungers for a little human companionship during long hours spent alone; this disk is for you. The programs which make up Poker Party will bring to your computer terminal the faces and the voices of three rustic cow hands out of the old west who invite you to try your luck with them in a friendly game of old-fashioned draw poker, America's national game. You'll meet Shorty, Ole, and Cisco who play a conservative brand of poker that's hard to beat. Yet, with patience and shrewdness just as in a real poker game, you can come out the winner. But it ain't easy, pardner!

**Requirements:** Poker Party is designed to run on an H/Z-100 (not PC), with at least 128k of system memory. Z-DOS or MS-DOS is also needed along with ZBASIC. Although not required, fuller enjoyment can be obtained if the P-SST board from Software Wizardry is installed. A color monitor is highly recommended, however, the program will work properly on a monochrome monitor.

The following files are included on the HUG 885-8042-37 Poker Party disk:

ADIOS	.DAT	ANTE	.DAT
DEAL	.DAT	IBET1	.DAT
IBET2	.DAT	IBET5	.DAT
ICALL	.DAT	ICHECK	.DAT
IDROP	.DAT	IRAISE1	.DAT
IRAISE5	.DAT	ISTAY	.DAT
IWIN	.DAT	PPRTY	.BAS
PPRTY2	.BAS	PPRTY3	.BAS
PPRTY4	.BAS	RULES	.TXT
TALK3	.DAT	TRIO	.BLU
TRIO	.GRE	TRIO	.RED
README	.DOC		

**Author:** Robert E. Newlon

**Program Content:** While draw poker is played differently in various places, this program generally follows the rules and procedures described in the book ACCORDING TO HOYLE by Richard L. Frey. The game is limited to four players. Three of them are controlled by the computer. You are player number four, and must make your own decisions. The cards used in this game are the typical new pack which comes with two jokers. These jokers are completely wild and can be used as any card you choose.

**Comments:** Before I reviewed this program, I wondered, 'How much fun could a computerized version of 'draw poker' be? Boy, was I in for a surprise!' The graphics are outstanding, and I really felt as though I were playing with three other people (the author uses graphics to display the other three players on the screen).

**TABLE C Rating:** (10)

=====  
**P/N 885-8043-37**  
**CALC**

**Introduction:** CALC is a faithful, working, full-function simulation of the Hewlett-Packard HP-25 pocket calculator. There are only two differences. These are, all ten registers may be used as storage registers rather than the first eight, and the number of program steps has been arbitrarily set to 100 rather than 49. User programs may be stored on disk for subsequent loading. The calculator uses RPN (Reverse Polish Notation) like most HP calculators. Input to the calculator is via a light pen.

**Requirements:** To properly use this program, you need an H/Z-100 (not PC) series computer with at least 128k of system RAM. It is in full color so all video RAM planes should be installed (192k). Finally, a light pen must be connected to J4 on the rear panel. This program requires MS-DOS version 2.0 or greater; it will not work with ZDOS.

The following programs or files are included on the HUG P/N 885-8043-37 CALC disk.

CALC	.COM	FACT	.PRG
README	.DOC	ABSTRACT	.DOC

For those of you who don't have a light pen for your H/Z-100, HUG has made special arrangements with the Lite-Pen Company of Los Angeles, California to enable you to purchase a very high quality lite pen at a distributor's price. Included with this software is a coupon allowing \$114.98 off the standard retail price for this lite pen. This single pixel resolution pen normally sells for \$204.95 but can be purchased with this coupon for only \$89.97. Included with this lite pen are two cables (one for the H/Z-100, and one for a standard IBM PC). Even if you never use CALC, the coupon alone is worth the price of this HUG package.

A more detailed review of this pen can be found in the September 1986 issue of REMark.

**Author:** Robert F. Doolittle

**Comments:** Each key is labeled with a 2 character label. These labels change dynamically in both color and content when a calculator 'f' or 'g' function key is pushed. An on-line HELP facility is included to further define these key labels. It is toggled on and off by the keyboard HELP key. More extensive instructions and explanations are provided in the README.DOC file.

**TABLE C Rating:** (5), (10)

## P/N 885-8044-37 MS-DOS TCSPELL

**Introduction:** TCSPELL is a spelling checker designed to be quick and easy to use. Dictionary size is only limited by disk space while the document size is limited only by the memory if the number of unique words exceeds the room left in memory.

**Requirements:** TCSPELL will run on systems with as little as 64k of memory but the number of unique words in a document is limited to approximately 600 words. It runs on the H/Z 150-PC compatible computer series, either monochrome or color monitor, with MS-DOS (any version).

This disk contains the following files:

TCSPELL .COM	TCSPELL .TUT
TCSPELL .DOC	MASTER .DIC
UNCOMP .COM	COMPRESS .COM
TCMERGE .COM	README .DOC

**Author:** Tim Schultz

**Program Content:** The TCSPELL program is a spelling checker program that uses up to 10 disk based dictionaries. The dictionaries may exist in compressed format or as a sorted list of lowercase words separated by a carriage return and linefeed. The program reads all the unique words in from the file to be spell checked and then checks each specified dictionary in order to eliminate all valid words. The user is then prompted for action on each unknown word. Available actions include: Add to dictionary, store in CR/LF file name SAVE.\$\$\$, Correct in file, Show word in context, and Ignore the word.

TCSPELL operates on standard ASCII (CR/LF) files and Wordstar format files. Soft hyphens and hyphens across line boundaries are handled correctly. Hard hyphens are included as part of a word, whereas soft hyphens are ignored.

The TCSPELL program was designed to be easy to use, fast, and as complete as each user requires. A dictionary, containing approximately 20,000 words, is included along with utilities to compress, expand (uncompress), and merge existing dictionary files. The user then has the option of expanding the supplied dictionary, editing it with any editor, merging an existing dictionary, or compressing an existing dictionary for faster access and less storage space.

Included on the disk are a tutorial/manual (TCSPELL.DOC) and an example file (TCSPELL.TUT) to be checked in parallel with the tutorial.

**Comments:** None

**TABLE C Rating:** (9)

## P/N 885-8045-37 MATT

**Introduction:** MATT is a Turbo Pascal program designed to facilitate operations on one and two-dimensional matrices. The program is entirely menu-driven, and uses a spreadsheet type of display to make matrix entry and editing very fast and easy. Turbo Pascal is a product of Borland International, Inc.

**Requirements:** Two versions of MATT are included. One is for the H/Z-100 (not PC) and requires MS-DOS version 2 or above. The program uses the H-19 graphics and, therefore, requires the graphics version of ALTCHAR.SYS be on the boot disk. The other version of MATT is for the PC compatible series using MS-DOS version 2 or above. Color is not required for either version, and only the basic 128k memory is needed.

The following files are included on the disk:

**MATT.DOC** — Complete indexed documentation with examples.

**WSMATT.DOC** — WordStar formatted version of the documentation.

**README.DOC** — HUG disclaimer and any last minute updates.

**MATT.PAS** — Source code for the Z-100 version.

**MATT.COM** — Z-100 executable version.

**PCMATT.PAS** — Source code for the PC compatible version.

**PCMATT.COM** — PC executable version.

The following are Z-100 specific include files:

BOX .PRO	MYIO .PRO
PAGESWAP .PRO	

The following are PC specific include files:

BOX .PC	MYIO .PC
---------	----------

The following are included in both versions:

DIREC .PRO	INV .PRO
SUM .PRO	MULT .PRO
TRANS .PRO	

**Author:** Dennis K. Greer

**Program Content:** MATT is designed to provide a very user-friendly environment in which to perform most operations on one and two dimensional matrices. Matrix operations are performed on two input matrices with the results stored in a third. Maximum size for each of the matrices is 59 rows by 59 columns. Among the operations available are:

- Determinants and Inverses
- Element, Row, and Column editing
- File and Directory Operations
- Matrix Initialization and Copying
- Multiplication
- Output to Printer (with titling)
- Row-Reduction
- Summation and Subtraction
- Transpose
- Disk Reading and Writing (ASCII or binary)

**Comments:** MATT was written with ease-of-use and speed in mind. The menu items are designed to be mnemonic. For instance, "M" performs multiplication, "S" performs summation, etc. In short order, the new user can be performing matrix operations without needing to look at the menu. "One touch" menu response, spreadsheet type matrix entry and editing, and input "garbage filters" make MATT very friendly. Support for the 8087 numeric coprocessor can be added by simply recompiling the source using Turbo-87 from Borland International, Inc. Z-100 owners having the MOUSEPACK by Paul F. Herman will find the spreadsheet editing compatible with their mouse system.

**TABLE C Rating:** (10)

## P/N 885-8046-37 Assembly Language Utilities

**Introduction:** This package includes a variety of utility programs designed to be used with Zenith Data Systems' implementation of both Version 2 and 3 of the Microsoft Disk Operating System (MS-DOS) for Zenith Z-100 series personal computers and IBM PC-compatible (Z-100 PC) personal computers. Most of the programs will work fine on other vendor's versions of MS-DOS (IBM's PC-DOS, for example), although this can't be guaranteed in all cases.

Since the 8088 assembly language source code is provided for the programs in this package, it can be used as a tutorial on assembly language programming. More sophisticated users may wish to study the techniques used in order to apply them in their own programs. Some of the advanced techniques used include terminate-and-stay-resident processing, dynamic memory management, and child process execution.

**Requirements:** You will need either an H/Z-100 series or H/Z-100 PC series computer and either Version 2 or 3 of the MS-DOS operating system.

If you wish to modify the programs in this package, you will need the Zenith MS-DOS Programmer's Utility Package, or either the Microsoft or IBM Macro Assembler and Linker. All of the assembly language source files included in this package can be assembled using any version of MASM from 1.27 through 4.0

**Author:** John F. Stetson

**Content:** In addition, there are several documentation files provided which cover a variety of MS-DOS related topics. These include an overview of the new capabilities in MS-DOS 3.1, problems with the ECHO command, use of the PROMPT command, modifications to the Z-100 MS-DOS BIOS to support the use of up to four 5" 48 and 96 tpi floppy disks, and the following modifications to the MDISK.DVD memory disk device driver supplied with the Zenith MS-DOS Programmer's Utility Pack:

- Modifications to allow MDISK to retain its contents across a warm system reboot.
- Modifications to add a software "LED" graphic symbol which indicates when the memory disk is being accessed, and whether a read or write operation is occurring.
- Modifications to add a disk volume label to the memory disk and to fix various bugs.

README .DOC	- Documentation file
ASMCOM .BAT	- Sample .BAT file used to assemble the programs

The following files are Z-100 specific.

KEYS .ASM	- Display Z-100 function key definitions
KEYS .COM	- Executable version of KEYS

The following files are designed to be used together as a simple time logging system under MS-DOS. By placing the LOGON.BAT file at the end of your AUTOEXEC.BAT file, you will have the date and time you last powered down displayed. By executing the LOGOFF.BAT file prior to powering down the system, you will have the date and time you last booted the system displayed.

DATETIME .ASM	- Display system day, date, and time
DATETIME .COM	- Executable version of DATETIME

LOGON .BAT	- Display last date/time off system at boot time
------------	--

LOGOFF .BAT	- Display last date/time on system at exit time
-------------	---

LOGON .DAT	- Data file used by .BAT files above
LOGOFF .DAT	- Data file used by .BAT files above

The following files are designed to be used together to provide an automatic method of rebooting the operating system in such a way that it is free from any device drivers, or terminate-and-stay-resident type programs. This is helpful when testing new versions of these types of programs in order to avoid any possible conflicts.

BOOT .ASM	- Reboot the operating system
BOOT100 .COM	- Z-100 executable version of BOOT.COM
BOOTPC .COM	- PC compatible executable version of BOOT.COM
NATIVE .BAT	- Reboot without device drivers or resident programs
NORMAL .BAT	- Restore normal system operation after running NATIVE

The following files will run on both Z-100s and PC compatibles.

BEEP .ASM	- Generate a tone in .BAT files
BEEP .COM	- Executable version of BEEP
CMD .ASM	- Execute COMMAND.COM as a child process
CMD .COM	- Executable version of CMD.COM
CPU .ASM	- Determine the speed of the CPU chip
CPU100 .COM	- Z-100 executable version of CPU.COM
CPUPC .COM	- PC compatible executable version of CPU.COM
CRLF .ASM	- Send CR and LF to console from a .BAT file
CRLF .COM	- Executable version of CRLF
FF .ASM	- Send a form feed character to the printer
FF .COM	- Executable version of FF
MODEM .ASM	- "Dumb" terminal modem program
MODEM100 .COM	- Z-100 executable version of MODEM.COM
MODEMPC .COM	- PC compatible executable version of MODEM.COM

PASSWORD .ASM	- Password protection for hard disk systems	SHELL100 .COM	- Z-100 executable version of SHELL.COM	Z100BIOS .DOC	- Modifications to the Z-100MS-DOS BIOS
PASSWORD .DVD	- Executable version of PASSWORD	SHELLPC .COM	- PC compatible executable version of SHELL.COM	MDISK1 .DOC	- 1st file of modifications to MDISK.DVD
RAM .ASM	- Display total RAM, RAM used, and RAM free	SPEEDUP .ASM	- Console speed-up utility program	MDISK2 .DOC	- 2nd file of modifications to MDISK.DVD
RAM .COM	- Executable version of RAM	SPEED100 .COM	- Z-100 executable version of SPEEDUP.COM	MDISK3 .DOC	- 3rd file of modifications to MDISK.DVD
RAMFIT .ASM	- Display or change RAM allocation strategy	SPEEDPC .COM	- PC compatible executable version of SPEEDUP.COM		
RAMFIT .COM	- Executable version of RAMFIT	WAIT .ASM	- Conditionally pause .BAT file execution		
RAMLIM .ASM	- Limit the amount of system RAM	WAIT .COM	- Executable version of WAIT		
RAMLIM .COM	- Executable version of RAMLIM				
SD .ASM	- Sorted directory utility program (V5.2)				
SD .DOC	- Documentation file for SD.COM				
SD100 .COM	- Z-100 executable version of SD.COM				
SDPC .COM	- PC compatible executable version of SD.COM				
SHELL .ASM	- Execute COMMAND.COM from within programs				

**Comments:** Most of these utility programs were written to fill a need that existed; Microsoft has a tendency to only superficially document the complex internal capabilities offered by MS-DOS; much effort and experimentation is required to make some of these capabilities actually work! In addition, many of the capabilities inherent at the MS-DOS system call level are often not brought out into the end-user command language; this package shows how to write your own programs to use these features.

**TABLE C Rating:** (10)

Continued from Page 22

**P/N 885-3042-37  
ZPC Upgrade Disk**

**Introduction:** This disk upgrades ZPC (885-3037-37) version 2.0.x to version 2.1.x. ZPC is a program that allows H/Z-100 (dual processor) computers to run many IBM-PC compatible programs. This upgrade allows you to run more programs, and provides support for hardware enhancements (such as the "Scottie Board") to support even more PC programs.

**Requirements:** To use this disk, you need ZPC Version 2 (885-3037-37), an H/Z-100 computer with 768k of memory, and MS-DOS version 2 or 3.

The following files are included on the disk:

README .DOC	ZPCUP .DOC
ZPCUP .COM	INT14 .COM

MASK .COM	PATCHER .COM
PATCHER .DAT	SETZPC .COM
FIXLTS .COM	FIXSYM .COM
BLINK .COM	DOS .ACM
KEY .ACM	ZPCASM .TXT
INT14 .ASM	MASK .ASM
PATCHER .ASM	SETZPC .ASM
FIXLTS .ASM	BLINK .ASM

Here is an explanation of some of the files on the disk:

**ZPCUP.COM** — This program automatically patches and upgrades your ZPC.COM file. The improvements made include the following:

**Improved Keyboard Handling.** The codes returned by ZPC as you type keys more closely resemble PC codes, so that difficult programs, such as QuickBASIC version 2 can be made to work, that would not work previously.

**Support For More Hardware.** The modified ZPC supports new hardware that allows programs which change video modes or colors by writing to ports to work properly.

**Improved Control-C and Control-Break Handling.** Handling of these codes more closely approximates the real PC world.

**INT14.COM** — This program provides support for a real IBM-style serial port, such as is provided as an option on the "Scottie Board".

**MASK.COM** — ZPC unmask some interrupt lines on the S-100 bus when it is loaded. This program allows you to mask off those lines, in case you experience any difficulty with software that otherwise runs OK with ZPC not loaded.

**PATCHER.COM, PATCHER.DAT** — A new PATCHER.COM is provided because some early copies of ZPC Version 2 contained a flawed PATCHER.COM. The new data file, PATCHER.DAT, contains patches for more programs.

**SETZPC.COM** — A new SETZPC is included because some early copies contained bugs.

**FIXLTS.COM, FIXSYM.COM** — These programs patch LOTUS 1-2-3 release 2 and Symphony for use under ZPC.

**BLINK.COM** — This program allows you to have a non-blinking cursor while ZPC is in the PC mode.

**DOS.ACM, KEY.ACM** — These modules are part of the ZPC assembly source code that have been upgraded.

**ZPCASM.TXT** — This file lists changes that must be made to your ZPC.ASM file in case you want to reassemble the upgraded version of ZPC.

**S & K Technology, Inc.**  
Quality Software for Heath/Zenith Microcomputers

**For the Z100...**

**WatchWord® \$100.00**

*The ultimate in word processing with speed and power. See subscripts, superscripts, underlining, and boldface directly on the screen. Create your own fonts and special characters. Other features include centering, formatting, automatic horizontal scrolling with long lines, large file capability, split screen, macros, color, and an extensive configuration facility. See reviews in Remark (July 1985) and Sextant (Jan-Feb 1985, Sep-Oct 1985). Requires 192K RAM.*

**The Resident Speller™ \$100.00**

*Spelling checker for use with WatchWord. Checks as you type from inside WatchWord or checks a file. Includes a 50,000 word expandable dictionary. Requires 192K RAM to check a file. Requires 300K RAM to check as you type.*

**Demo disk for both \$ 3.00**

**For IBM compatibles including the Z150 and Z200 series...**

**PC WatchWord® (New) \$ 99.95**

*The ultimate in word processing for the sophisticated user. Most of the features of the Z100 version except for screen fonts. Requires 256K RAM.*

**PC Resident Speller™ \$ 99.95**

*Spelling checker for ASCII files such as those created with WatchWord, WordStar, WordPerfect, PeachText, and VolksWriter. Includes Strike. Requires 256K RAM.*

**Strike™ \$ 49.95**

*Adds as-you-type spelling checking to your word processor. Works with the word processors above and also with DisplayWrite, MultiMate and PFS:Write. Requires 100K RAM in addition to that used by your word processor.*

**Demo disk for Strike and The PC Resident Speller \$ 2.00**

**Demo disk for PC WatchWord \$ 2.00**

Texas residents please add state sales tax.

# MAKE LEARNING AN ADVENTURE

## Heathkit/Zenith Educational Systems

Feature success-oriented courses with a unique blend of technical theory and real-world applications. With our advanced course trainers and the hands-on experience they give you, you'll quickly gain valuable electronics skills. And see exciting electronics concepts come to life before your eyes. Plus our courses are approved by nationally recognized organizations and can earn you valuable Continuing Education Units for non-credit adult education. So why not embark on an exciting learning adventure today?

### The MACRO-86 Assembly Language Programming Course

Teaches you to program almost any computer using the popular Intel 88/86 series of microprocessors and Microsoft DOS.

### The MACRO-86 Algorithms Course

Introduces you to algorithms, an important phase in computer programming. And provides valuable programming experience.

## HERO® 2000 Teaching Robot

Is the perfect educational trainer for learning about robot automation programming, electronics for automation, intelligent machines and robotics. HERO 2000 is equipped with an electronically synthesized voice that delivers unlimited vocabulary, music and sound effects. It also has a multi-jointed arm and gripper with sense of touch.

This computerized teacher features a 16-bit 8088 master microprocessor, 11 8-bit microprocessors and BASIC in ROM for easy programming. Plus 20 robot commands, 24K RAM expandable up to 576K, sonar, and built-in sensors for measuring light, sound and temperature levels.

## AutoCAD computer-aided design software

Lets you easily produce high-quality drawings and schematics on your personal computer. This superb software from Autodesk Inc. is available with several advanced drafting extensions, for both the Heath/Zenith 100 Computer and Heath/Zenith PCs. A special 3D drafting extension is also available.

## The Computer Servicing Series

Consists of three parts, from fundamentals through peripherals and on to maintenance. Uses the 16-bit Trainer which is ideal for breadboarding computer circuits that interface to the 8088 microprocessor.

Baton Rouge, LA 70803

# IN MULTIUSER COUNTRY, ALL ROADS LEAD TO SCO

## SCO XENIX SYSTEM V

In the heartland of multiuser country, you're licensed for up to 16 users on IBM® PC AT® or PC XT®, respective compatibles, or AT&T PC 6300 Plus!

Discover unprecedented price performance per user.

Enjoy Multiscreen™ vistas in breathtaking **setcolor**. Explore DOS cross-development. Protect your investment with 8086/80286 and XENIX 3.0 applications compatibility. And bring along your widest range of peripherals!

## SCO XENIX-NET XENIX-DOS LAN

Travel through SCO XENIX-NET and witness the future of office computing: networked DOS *and* XENIX PC workstations. Visit a unified environment that is both "multiuser" *and* "LAN."

Watch XENIX and DOS systems serve each other and share resources — each doing what it does best — without sacrificing the strengths of either.

## SCO uniPATH™ SNA 3270

Gateway to mainframe territory, SCO uniPATH is a must-see for both VARs and MIS/DP managers. Experience the real power of PCs in corporate distributed processing.

Build customized applications with programmatic interfaces, and let your networked multiuser PCs process mainframe data — with session hold and multiple sessions per user, of course.

## HOT-LINE SUPPORT DOCUMENTATION USER TRAINING NEXT EXIT

SCO's multiuser traveler's services are unrivaled, and start with SoftCare™ Support, including a toll-free hotline! You can even enjoy 30 days of Introductory SoftCare with the purchase of each product — on us! SCO's excellent documentation is considered a standard for multiuser road guides. And a wide variety of training courses is available for all SCO products.

SCO applications available for all popular UNIX/XENIX systems.

## SCO Professional™ 1-2-3 WORKALIKE

Take this exit, and you'll swear you're on Route 1-2-3® — until you notice enhanced features and multiuser access that

Lotus® users only dream about! But don't worry about culture shock — if you like 1-2-3, you'll *love* SCO Pro. Read and write to 1-2-3 DOS files, enjoy full 1-2-3 functionality and macro support, and rest easy with file locking data security.

## SCO FoxBASE™ dBASE WORKALIKE

As with SCO Professional, another *deja vu* awaits you on this route — this time, dBASE II™ — but once again, it's better, faster, and multiuser! Bring along your dBASE II data files, macros, and expertise — they all work here, too! You'll be sharing dBASE II-compatible data with friends, in record and file locking comfort, right out of the box.

## SCO Lyrix™ WORD PROCESSING

Built especially for UNIX™, "what you see is what you get" SCO Lyrix is a favorite of both new and veteran multiuser travelers. Fully user-configurable, it's a natural attraction to foreign language visitors, as well as system administrators. You'll appreciate advanced WP features such as spelling corrector, and automatic footnotes and section numbering, as well as direct menu access to UNIX and other destinations.

## SCO SALES - INFO 1-800-626-UNIX

Call us today to order any of these and other exciting SCO products such as Multiplan®, Informix®, languages, and business graphics. VARs, ISVs and other qualified customers can "mix

and match" for cumulative discounts across the entire SCO product line. We look forward to booking your next multiuser tour!

See us at UniForum™, Booth 1400, Washington D.C., Jan. 20-23

NEW  
PRODUCT  
ANNOUNCEMENT

## EasyWIN

Most economical hard disk system available for the Z-100. It replaces the Z-217 hard disk system and works just like it. You can prep it, part it, and boot from it.

### Features:

- Direct replacement of Zenith Z-217 Winchester disk.
- Controls 2 physical drives.
- Supports auto boot, all Z-100 formats, and Zenith diagnostics.
- Operates in any Z-100 with or without EasyPC.
- Future support of other hard disk controllers, removable cartridge drives, etc.
- Operates at 5 or 8 MHz.

### Includes:

- Intelligent controller card to adapt IBM PC compatible hard disk controller to the Z-100.
- Western Digital PC hard disk controller card.
- Seagate 10/20/30 MB hard disk drive (ST215/225/238).
- Drive cables.
- Fully documented User's Manual.

## Z-148 Expansion Chassis

Finally a way for Z-148 users to take advantage of the growing world of IBM PC hardware including EGA, PGA, modems, hard disk drives, multifunction cards, etc.

### Features:

- 8 available slots: 6 full PC slots and 2 half-size slots.
- 135 watt switching power supply with built-in fan.
- UL and FCC approved chassis and power supply.
- 5 or 8 MHz no wait state.
- Standard internal mounting brackets for 2 full-height or 4 half-height drives.
- Easy access, flip top metal case.

### Includes:

- Z-148 adapter.
- 5 ft. shielded cable.
- Fully documented Installation Manual.
- Dimensions: 17.5" D x 19.5" W x 5.5" H.
- Weight: 25 lbs.
- Color: Ivory.

## I/O Plus

The least expensive way to obtain respectable but limited PC compatibility in a Z-100. Will run many, but not all, popular PC programs. Some copy protected programs may present problems unless patched.

### Features:

- ZPC™ program and hardware circuit.
- ZPC program on EPROM (optional).
- One game port (2 joy sticks).
- Up to 115k baud rate.
- 2 IBM 8250 serial ports.
- Clock calendar with battery back-up.
- Fully documented User's Manual.

ZPC is a trademark of Heath Users Group. IBM & IBM PC are trademarks of IBM Corporation. Z-100, Z-148 & Z-217 are trademarks of Zenith Data Systems.

Call now for your copy of the Fall '86 Edition of the UCI Product Catalog.

# KBUILDERS JOURNAL

Special Edition

\$2.50

Volume 0, Issue 0 • January 1987

P/N 000-0000 Issue 0

## INTRODUCING ... KBJ

*The Kit Builders Journal,  
The Magazine For The Kit Building Hobbyist*

- *The reader will be able to enjoy independent reviews on both electronic and non-electronic kits.*
- *KBJ will feature a wide variety of kit building information for Heath products as well as other do-it yourself projects.*
- *The Kit Builders Journal is available through subscription only and will be delivered every other month, starting in January of 1987.*
- *The Journal will include how to sections devoted to building and using products, tips from Heath Technical Consultants on correcting problems or improving performance, small construction projects, modifications, questions/answers and other valuable information relating to this fun hobby.*

**For subscribers only!** KBJ will be offering super discount prices on selected Heath products in each issue. Just one product purchase during the year could save you several times the KBJ subscription price.

Subscribe now and get your Kit Builders Journal! Order KBJ-2000-NM and get six big issues for only \$9.95. Use your Visa, Mastercard or Heath Revolving Charge. Call TOLL FREE 1-800-253-0570. In Alaska and Michigan call 616-982-3411.

For outside U.S. orders send your name and postal address to Heath Company P.O. Box 1288, Benton Harbor, MI 49022. Rates in U.S. Funds for Canada, APO/FPO and all others: \$17.95.

# Heath/ Zenith Related Vendors

AA

## A. U. Software

Now with Cambridge Script Processing

# HONEYWELL USERS

**Connect Your Z-100 Series Or Z-100 PC Series  
Computer To Honeywell Host Systems**

**The ultimate micro-to-mainframe link**

**PC77/78 — Emulates the Honeywell VIP7700/VIP7800  
series of synchronous terminals**

**Features:**

- color attribute mapping • hot key to DOS • access host via multiple windows • print redirection • script processing • help facility
- print spooling

**File Transfer:**

- menu driven • macro capability to bypass menus • data compression • file identification security features • attended and unattended mode of operation • restart capability • help facility

**PC73/78 — Emulates the Honeywell VIP7200/VIP7300/  
VIP7800 series of asynchronous terminals**

**Features:**

- color attribute mapping • hot key to DOS • print redirection • script processing • help facility • print spooling

**File Transfer:**

- Kermit • Xmodem • ASCII • menu driven • macro capability to bypass menus • attended and unattended mode of operation

The personal computer can be connected to any Honeywell host via a modem, modem-bypass or multiple interface unit (MIU) and may reside on a communications line with other PC's or terminals. No host system or application software modification, regardless of the operating system is required.

*High-performance communications software from:*

**Cambridge Computer Corporation  
80 Mount Sanford Road, Mount Carmel, CT 06518-1210  
203/288-6004, Telex 6502236599**

Disk options. Double Density 8"/5.25" Floppy Drive Controller. ZS-100 7.5 MHz Speed Module. 2.4Meg. 5.25" Floppy package. Special Notes: C.D.R. Systems has manufactured quality products for the Heath/Zenith community for many years.

#### **CLEO Software**

Division of Phone 1, Inc.  
461 N. Mulford Road  
Rockford, IL 61107

Contact: Kim Hagemeyer Phone: (800) 233-CLEO

Comments: Hardware, software and consultation available. Products: CLEO 3270 SNA or BSC allows your Z-100 PC to emulate a remote cluster of IBM 327x terminal devices anywhere a 3274/76 cluster might be used. 3780Plus is for fast, accurate file transfers using IBM's bisync protocol. CLEO 5251/12 supports remote SYSTEM 3x terminal emulation for the Z-100 PC. Now you can share mini-frame resources, such as high speed printers, with PC-users at remote sites. SYNCmodem is an internal synchronous auto-dial/auto-answer modem for the Z-100 bus. It comes fully integrated with your choice of CLEO 3270 SNA, BSC, 3780Plus, or CLEO-5251/12 software for easy dial-up operation.

#### **CPAids, Inc.**

1061 Fraternity Circle  
Kent, OH 44240

# YOU NEED SEXTANT

Your computer can do a lot for you—if you have the support you need. One source of support thousands of Heath/Zenith users rely upon is *Sextant* magazine—the *only* independent magazine about your Heath/Zenith computer. Whether you use an H/Z150, H/Z100, H/Z89, or H8, you'll find articles in every issue which apply to your system.

You can explore MS-DOS, Z-DOS, CP/M, and HDOS in *Sextant*. Applications, programs, compatible hardware and software, and the latest developments in the Heath/Zenith community are among the topics covered in every issue of *Sextant*. Regular features include:

**"How-to" articles.** Designed to help you enhance your system. Read how other users have altered their systems to suit their needs—and how you can too.

**Short program listings.** These include utility programs and games, which you can use immediately.

**Reviews of products from Zenith and independent suppliers.** Written to help answer your questions about hardware and software purchases you're considering.

**Regular Columns.** Each issue features columns covering the H8 and H/Z89 ("The Eight-Bit World" by Walter J. Janowski); the Z100 ("Z100 Notebook" by William N. Locke); and the C programming language ("C Notes" by Joseph Katz).

**Advertising by independent suppliers.** In each issue you'll find 70-90 advertisements of products for your Heath/Zenith system—many of which you just won't find anywhere else.

**Coverage of community affairs.** You'll read about major events, conferences, and personalities in the Heath/Zenith user community, and what effect they could have on you.

**Don't miss all the information packed into each issue of *Sextant*!**

**Start your subscription today!**

**Call Toll Free:  
800/341-1522**

(DATATEL 800™, for orders only, Monday-Friday  
8 a.m.-9 p.m., and Saturday 9 a.m.-5 p.m.,  
Eastern Time)

**Or mail this coupon to:**

Sextant, Dept. R87  
716 E Street, S.E.  
Washington, DC 20003

Please allow 6-8 weeks for delivery of your first issue.

### Money-Back Guarantee

Your satisfaction with *Sextant* is completely guaranteed. If at any time you're not completely satisfied, just let us know and your money will be refunded—even for the issues you've already received.

### I need *Sextant*!

# “Have Your Computer Talk To Ours!”

“HUGPBBS is on line 24 hours a day, with over 20 megabytes of free software available for downloading. There’s software for every Heath/Zenith operating system, with the majority being for MSDOS, and specifically the Heath/Zenith PC compatible computer systems. Also included is software for HDOS, CP/M, and MSDOS for the H/Z-100 computer system. In addition to this software is a message base through which you can exchange information with other HUG members. Have your computer call (616) 982-3956, ‘The Heath Users’ Group Personal Bulletin Board System’, and make connection at 300, 1200, or 2400 baud. Type a carriage return several times to get my attention. Registration requires that you supply your human’s first name, last name, HUG ID number, and some sort of secret password (up to 16 characters).

Alternatively, your human can call Jim Buszkiewicz at HUG and register via voice connection at (616) 982-3837. Call today! All it takes is a computer, modem, and a phone call for your computer to talk to ours!”

MOC

# TaxAide

Income tax preparation worksheets for use with your Lotus 1-2-3.

- PRODUCES IRS APPROVED PRINTOUTS - NO SPECIAL FORMS TO BUY ●
  - Easy to Use - Menu Driven - Integrated ●
  - Screen Displays Resemble Actual IRS forms ●
  - Automatically Calculates Income Tax ●
- Full Technical Support - Satisfaction Guaranteed ●

**TaxAide Plus** - Provides worksheets for Forms 1040, 1040A, 2106, 2119, 2210, 2441, 3468, 3800, 3903, 4562, and 6251; Schedules 1, A, B, C, D, E, F, G, R, SE, and W; plus IRS worksheets. Multiple Forms 2106 and 4562 and Schedules C and SE. TAXAIDE PLUS PRODUCES IRS APPROVED PRINTOUTS FOR ALL FORMS AND SCHEDULES, INCLUDING 1040 AND 1040A. Ideal for income tax preparers. **\$59.95**

**TaxAide Personal** - Provides worksheets for Forms 1040, 1040A, 2106, 2441, and Schedules 1, A, B, D, G, R, and W, plus IRS worksheets. Two Forms 2106 are provided. Produces IRS approved printouts (except Forms 1040 and 1040A). **\$29.95**

**REQUIRES ONLY 192K of RAM** - If you have more memory, you may still run your background program such as SideKick or Perks.

Requires Lotus 1-2-3 Release 1A or later, and DOS 2.0 or later.

To order, send check to:

## Articles On My Computer, PC Series Computers, Heathkit Catalog, PC-TYPE, PC-WRITE

**William M. Adney**

*P.O. Box 531655  
Grand Prairie, TX 75053-1655*

**H**ave you ever wondered why most new microcomputers are called "personal computers?" Many people believe that the name was a result of the fact that the computers were small and the price was so low that they could be purchased by an individual. Most of you have probably observed that description is simply not true. I certainly have. It has become clear to me that personal computers are "personal" because if someone makes a derogatory comment about your computer (or accessories or opinions), you take it "REAL PERSONAL." If you don't believe that definition, just ask an IBM computer owner when they will get a REAL computer and watch their blood pressure rise instantaneously! Oh well, on to bigger and better things . . .

### **Why Don't You Have Any Articles On MY Computer?**

In an attempt to keep CURRENT with the latest news at HUG, I usually talk to the HUG secretary, Margaret Bacon, at least once a month. Based on some of the letters that HUG receives, I understand that there is concern among some Huggies that REMark does not have any articles about their specific computer systems. Let's take a look at that issue.

In general, there are two parts to the answer. First, and perhaps most important, is the fact that most articles written about the '150 series computers (i.e. the '151 and '158) ALSO apply to the '138 (discontinued), '148, '161 (discontinued), '171, and '181. Many of those same articles also apply to the Z-200 series including the '241 and '248 which are AT compatible.

For the most part, any article written about one of those specific models will usually be applicable to the entire PC Series which is frequently referred to as the Z-100 PC (by Zenith) or the Z-150 (series) in many REMark articles. That includes articles about virtually all software, most PC compatible hardware, and virtually all PC type program listings in whatever language for the PC Series.

As far as I am concerned, I used to call the Z-100 PC Series the Z-150's because Zenith's name was too easy to confuse with the

"standard" Z-100. I have started using the name "PC Series" to refer to all PC compatible models from the Z-138 to the Z-248. That may be one standard that we can all agree on.

Lest we get too carried away with this "standard", you should know that the term "PC compatible" may not mean Z-241 or Z-248 (or IBM AT) compatible. More on that in a minute.

So what's the answer to the question: "Why doesn't REMark have any articles about MY computer?" As a matter of curiosity, I went through the last 12 issues of REMark. In every case, there was at least part of one article that mentioned the Z-100 and PC series computers. In my "general information series" for example, discussions are intended for all MS-DOS and PC-DOS systems with emphasis on the unique features of Heath and Zenith computers and operating systems. But I think that there is another important point that some people may have overlooked.

### **Exchanging Ideas**

HUG (and REMark) is provided as a service to its members for the purpose of fostering the exchange of ideas to enhance their usage of Heath/Zenith equipment. In case you are wondering how I came up with that profound statement, you can find it in every issue of REMark. But there's more to HUG than that.

If you read that statement carefully, the idea is to promote the exchange of ideas among HUG members. That means that the articles in REMark are written by HUG members for HUG members. I hear that HUG occasionally receives letters that something about a particular piece of hardware or software hasn't been in REMark. I occasionally get letters asking about a subject for an article in REMark. Many of those questions sent to me eventually end up as articles in one form or another.

The real point of this rambling is that if you want to see an article in REMark, why don't you consider writing it? Remember that all

REMark articles are written by HUG members — that's part of the deal. Your article contribution to REMark does several things.

First, you get to see your name in print which is a noteworthy accomplishment. Perhaps more important is that you will become an "expert" on whatever the subject matter is. If you can write a good article on a particular subject, part of that is the research and understanding that you gain in the process.

Many people tell me that they don't write articles because they are not "qualified". I think that they may have missed the point. I wasn't "qualified" when I began writing the FlipFast books either, but by the time I finished them, I had spent the time and effort necessary to become "qualified" — whatever that means. The end result is that I became intimately familiar with CP/M-80, CP/M-85, and MS-DOS.

Virtually all of my articles also involve some kind of research. I choose subjects that I personally think are interesting. Then it's up to me to try to make it interesting (or at least readable) to you. It's important to recognize that few writers are experts on all subjects in any field. But they become experts by doing the research and development of an article or book during the process.

The bottom line of this whole discussion is that I am trying to persuade you to write articles for REMark. If you want to know more about something, do the research and write about it. I think it's too bad that some people write to REMark saying that their membership does not "fill their needs" and then fail to mention exactly what those needs are. My experience is that telepathy does not seem to work well in helping any of the REMark staff to make changes that you want. Enough of that, let's take a look at some aspects of the various computers.

### **In The Beginning . . .**

Heath Company has marketed a wide variety of computer kits for a number of years. The H-8, H-11, and H-89 have been superseded by the newer models, but many people still like them for a variety of reasons. As I've mentioned before, I have always regretted trading in my H-89 for the '100 — I wish I had kept it. Such is progress I suppose.

At this point, it looks like the '100 is being phased out in favor of the newer PC compatible line. I don't care what anyone says, including IBM, I still think that the '100 is still one of the most advanced microcomputers available today. Due to its inherent incompatibility with the "IBM standard", I suspect that's the reason for its inevitable decline in sales.

But there is considerable confusion as to what is what in the Heath and Zenith computer lines. Try to explain the difference between the Z-100 and the Z-100 PC, and watch folks stare at you with a dazed, blank look of total misunderstanding.

I think that Zenith made a horrendous mistake in calling the PC Series the Z-100 PC. Although I have heard several stories as to why that happened, I don't think they are worth mentioning. And so, one of the objectives of this particular article is to try to correct this problem. And part of the problem is now the new format of the Heathkit catalog.

### **The Heathkit Catalog**

Since I have been building Heathkits for nearly 30 years, I have seen one or two catalogs during that time. The current catalog (204 — Christmas 1986) is absolutely terrible. Some of you may have noticed the significant format change in the catalog that first appeared in the Fall 1986 (203) issue.

My particular objection to the format is that the specification blocks have been almost completely deleted in the new format. Someone missed the boat on that! My experience is that most kit buyers in general and Heathkit buyers in particular are technically inclined in one way or another. And they want to know about the technical specifications for a product before they buy it. I agree. Let's look at an example from the Christmas catalog that is not about computers.

Consider the various multimeters that are shown on pages 50 and 51. One factor that you usually want to know about is the sensitivity of a meter — usually called the input impedance. Even though you might know the general ranges (and sensitivity) is usually a function of price, it's still nice (and I think essential) to be able to compare the various features listed in a specification block. Why spend money for features you don't need?

By the time you take a look at the computers, it's nearly impossible to get the information from the text of the description. Pages 86 and 87 describe the HS-148 and HS-158 in one big lump. The similarities and differences of those two computers have been thoughtfully and carefully mixed together to the extent that it will take a couple of hours of detailed study — with paper and pencil for notes — just to decipher all of that text. Even then, some of the important information is omitted from the text so that it is nearly impossible to compare the features of each computer.

In my opinion, that is NOT the way a catalog should present information. A simple specification block showing the amount of memory, disk drives, expansion slots, size, and power requirements is a lot more helpful to a prospective buyer. All of the model numbers and options are confusing enough without omitting some of the easy to read details.

My solution to the problem was to prepare some listings showing the different views of the computers. That is easy to say, but it was really difficult to find the information since it was not in any of the current catalogs. My thanks to Bill Steward of Heath Company for coming to my rescue by providing specifications for the computers.

Listing 1 shows the standard Heath/Zenith PC series computer systems. The '138 is the portable computer that has been discontinued, but I thought it might be of interest to include it since I already had the specifications. As you can see, the '138, '148, and '158 are essentially the same so far as the specifications of the machines are concerned. Note that I have not listed the '151 or the '161 because they have been discontinued even though they are in the same general category as those listed systems.

Listing 2 shows the Heath/Zenith AT compatible computer systems, as well as the recently announced Zenith Z-386 that I just saw in InfoWorld. It was supposed to be at ComDex, so I'm looking forward to hearing reports on that. I wonder what they will use for an operating system since DOS 5.0, DOS 286/386, A-DOS or whatever they're calling it now is still not available.

Listing 3 shows the Zenith portable computers for those interested in comparing them. I think these type of listings are much better for comparing features, although I should note that I haven't included every single feature of each computer. These lists took more time to compile than I originally planned, and although I've taken considerable care in compiling these listings, be sure to check any specific questions with a dealer or the factory just in case a typo managed to sneak in.

I've noticed that typos seem to creep in various manuscripts when I have been absolutely positive that there were no errors at all. My

conclusion is that gremlins must use my computer at night. I guess that is an occupational hazard for anyone who does much writing.

### Looking At Heath Computers

The most important point about the current line of Heath Computers is that there are two completely separate types of computers that have similar names.

The original Z-100 is a dual processor system that has two Central Processing Unit (CPU) chips. The 8-bit processor, called an 8085, is generally compatible with CP/M software that was available for

the H-89. The compatibility exception to that is that some programs were written in assembler code that was compatible with the H-89's CPU — the Z80 —, and it's important to know that Z80 code does not run on the Z-100's 8085 CPU. That's why some programs that work fine on the H-89 will not run correctly (or at all) on the Z-100.

The Z-100's 16-bit processor is an 8088 CPU that is the same as the IBM PC uses. The 16-bit side of the Z-100 runs the Zenith MS-DOS, as well as other Zenith operating systems. From a technological point of view, the Z-100 is still one of the most advanced computers on the market today because of its dual CPUs.

MAP PROJECTIONS OF THE WORLD

- Produce high-res color graphics maps for the Z-100 and PC Series (or IBM) in any of 7 different projections (5 Azimuthal plus Mercator plus Polyconic) with your choice of origin, rotation, window or scale from global down to as low as 20 miles/inch.
- Pick either of 2 data files: World Coastlines with 5070 digitized points or a very-high-res file containing 11940 points for the Caribbean from Carolinas to Mexico to Amazon
- Track up to 10 hurricanes in animation.
- User's manual includes screen dumps and new plotter output of 16 maps to help you.
- Superfast execution-over 1000 pts/min
- Requires only DOS and color graphics. A color monitor is highly recommended

"...fascinating look at the world from every conceivable angle...The maps are excellently drawn. It's amazing that Dr Pittman could squeeze that much detail onto a single 5 1/4-inch diskette..."--Dave Felstul--BUSS # 91

At many H/Z Centers or send \$49.95 postpaid (Please specify Z-100 or PC Series) to:

For H37 with Heath CP/M..... \$59  
For C.D.R. BIOS 2.91.....\$49  
Check for Magnolia version.

**4MHz mod**

**\$45**

An easy to install plug-in module. No trace cutting or soldering. Speed may be toggled with software. Includes a replacement Z80A (4MHz). Includes CP/M software support for Heath, CDR Systems and Magnolia. Call or write for info on HDOS support. Specify disk format.

**6MHz mod**

**\$59**

Similar to our 4MHz modification, but increases the CPU speed to 6MHz. Requires some soldering on the CPU board. Includes a replacement Z80B (6MHz). May require replacing additional parts. Some technical knowledge is recommended for installation. CP/M support only. Specify disk format.

**REP3 - Automatic Key Repeat**

Hold any key down for half a second and the key begins repeating. Combine this with our 4MHz mod and make Word-Star fly! Simple plug-in installation.

Kit.....\$35  
Assembled.....\$45

**TIM2 - Real Time Clock**

Installs in the left hand expansion slots of the H89. Includes battery backup. Requires soldering 4 wires to the CPU board.

Kit.....\$65  
Assembled.....\$75  
Software on disk - specify disk format.....\$10

**DATESTAMPER**

Product of Plu\*Perfect Systems. Provides automatic time and date stamping for CP/M 2.2 files. Works with many real time clocks, including our own TIM2 product.

CP/M - specify disk format.....\$45

The Z-100 series of computers is generally distinguished by model numbers in the form of 10x, 11x, and 12x. Specific model numbers include the Z-101 and Z-111 (or H-1101 — usually called the H-110) for the Low Profile units. The All-in-One computer with the built-in CRT has model numbers like Z-121 or H-1121.

Everything else in the Heath/Zenith computer line is IBM PC compatible to one extent or another. I've noticed that "PC compatible" is a term that is often confusing to just about everyone since it is used in several different contexts.

#### PC And AT Compatibility

In many cases, the term "PC compatible" refers to the entire Zenith PC (or IBM) series of personal computers including the original IBM PC, the XT, and the AT. But there are exceptions.

For example, nearly all software that is "PC compatible" will run on all Zenith PC and AT compatible systems. The major exception to that is the copy-protected software that will only run at 4.77 mhz which is one reason that the '148 and '158 computers have a selectable clock speed. Games are the major category of software that are usually speed sensitive because of copy protection.

In many cases, that is simply due to the fact that the software uses a copy protection scheme that depends on the speed of the computer's internal clock. The PC's clock runs at 4.77 megahertz; the AT's at 6 megahertz. That's the reason that some software will only run on a Z-158 in the 4.77 megahertz mode.

Hardware is another story. Most "PC compatible" hardware is also Zenith compatible at the "standard" clock speed of 4.77 mhz.

Unfortunately, many hardware manufacturers have either intentionally or unwittingly limited their hardware to running at that "compatible" clock speed. In many cases, that can be corrected simply by installing faster chips, such as 120 nanosecond RAM. In others, it's a problem with the hardware and/or software design.

In the '158 for example, I have seen problems while trying to run the Novell network at 8 mhz — the Novell hardware and software

seems to have problems at any clock speed greater than the standard 4.77 mhz, and sometimes there are problems even at that speed. That's not limited to the '158 since I have been involved in some incredible problems using Novell network hardware and software on a total IBM PC system.

Another hardware problem has occurred with the '241 because of the "no wait states" operation. Even though the '241 runs at 6 mhz like the IBM AT, the elimination of one wait state (compared with

the IBM AT) causes speed conflicts that do not allow some AT compatible expansion boards to run in the normal "Zenith" mode. Part of the problem is due to chips that are simply not fast enough, and as a matter of fact, most of this hardware does not run on the 8 mhz IBM AT either for the same reason. Many of those same boards also do not run in IBM's 8 mhz AT as I have mentioned in previous articles.

Even more important, you may see that some software and hardware is advertised as AT compatible. Your first assumption should be that it is NOT compatible with the PC series (like the '148 and (158) computers. There are some significant hardware changes in the AT compared to the PC even though they both use the same operating system. The most obvious is that the AT uses an 80286 CPU as opposed to the PC's 8088. The 80286 CPU has some specific hardware features that are used by some programs. As new operating systems are developed, this will become even more significant.

I suggest that you specifically ask if the software is strictly AT compatible or whether it will run on a PC or compatible. You may be surprised to find that "nobody knows" — I've had that happen to me at a well known IBM retailer here in the Dallas area.

### **The Heath PC Series Computers**

In general, when someone talks about the Heath or Zenith PC series computers, that includes everything from the discontinued '138 transportable (luggable) through the new Z-181 that would have been a good model for IBM to use in the development of the Convertible. In some cases, that may also include the Z-200 series. Unfortunately, you may have to read the context of a comment to determine whether something refers to the '138 through the '181, as well as the Z-200. Even then it's not always clear.

What to do? When you see the term PC series or PC compatibles, you can safely assume that includes the following models: H/Z-138, 148, 151, 158, 161, 171, and 181. Since all of the PC related items that I specifically mention in these articles are tested on my '241, you can also assume that, unless I specifically state otherwise, the PC compatible software is also Z-200 compatible. In the event that I find something that requires the unique Z-200 hardware, such as the 80286 CPU, I will attempt to be specific that such is a hardware requirement unique to the '200 and the AT series computers.

### **User Hateful Software**

There is nothing quite as enlightening as introducing students to the mysteries of the IBM PC and various software. As I have mentioned before, I teach a course on "Introduction to Business Data Processing" at the University of Texas at Arlington. One of the objectives is to help students become familiar with the operation of personal computers since that seems to be the standard in the business world.

The first assignment in my course is to ask the students to prepare a short essay containing their views on personal computers, DOS, and the application software that we are using for the course — PC-TYPE for the word processing. I made the mistake of discussing some of the common terms that are used in the world of personal computers and specifically mentioned the term "user friendly software" in class along with my observation that it usually is not. In the assignment, one of my students, Vicky Moritz by name, says that she believes DOS and PC-TYPE are good examples of "user hateful" software because they are so complex and difficult. I agree.

In general, operating systems are not very user friendly. That applies to microcomputers using CP/M, MS-DOS or PC-DOS, and various Unix derivatives, as well as mainframe operating systems. One could conclude, as Vicky did, that there is a lot of "user hateful" software around.

### **A Look At PC-TYPE**

I first became familiar with PC-TYPE last summer when I taught it for the first time as part of the class. Learning new software is not an easy task for anyone, and many times the difficulty in learning it translates to: "It is no good or I do not like it".

I did not care much for PC-TYPE the first time, and I like it even less now. Regardless of price, it is a very poor introduction to PC software in general and word processors in particular. Although it was part of the "Evaluation Version" that is limited to about 200 lines, I do not believe that it is very well thought out. Block functions — copy, move, and delete — are especially clumsy, and they work somewhat differently than virtually all other word processors. Most of my students have found that the formatting features are also difficult to understand as are the special print functions like bolding and underlining.

PC-TYPE is mostly function key driven, but there are some significant inconsistencies in the way the function keys work. Most of them are fairly obvious, such as F5 (Dline), to delete an entire line. The F3 key is a printer toggle that displays a special menu for bolding, underlining, and such which are also toggles. Even that is complicated by the fact that, for example, Shift-F3 turns on bolding and CTRL-F3 turns it off. One of the key problems is that a new student has tried to delete one of these "printer markers" with the delete or backspace key and that doesn't work. You must use a Shift-F2 to delete a printer marker for bolding or underlining — not very intuitive as opposed to using a delete or backspace key.

Even if you have used "standard" word processors before, that process is rather confusing at first. It does not work like Watch-Word, Word, Word Perfect or WordStar. Even students familiar with one or more of those have had problems with PC-TYPE.

Formatting a paragraph in PC-TYPE can be a real chore. Older word processors, like WordStar, and some of the less expensive new word processors, like PC-TYPE, require a user to reformat a new paragraph to even up margins after changes. That is not too bad in itself since WordStar's CTRL-B command works just fine. But there is nothing about PC-TYPE's reformatting that is intuitive at all.

Many people are used to word processors that allow a paragraph indentation at some standard value on the order of five spaces or so. Most word processors provide for that "intuitive" indentation by setting the Tab key spacing at five spaces so that paragraph indentation is simple — press the Tab key. Not so with PC-TYPE.

You must set the paragraph indentation on the ruler line by entering an "I" in the appropriate column. If you do not, and you use the CTRL-R reformat command (like WordStar's CTRL-B), to "fix" the paragraph, PC-TYPE will cleverly reformat the paragraph by removing the tab indent so that you have a block style paragraph instead of an indented one. I can't recall seeing any other word processor that does that.

As a rule, most word processors begin in the "insert mode" as a standard default. I had previously thought that was a generally accepted standard, but the PC-TYPE default is the "overwrite" mode. While that is not particularly bad by itself, there is no way to

**Joseph Katz**  
103 South Edisto Avenue  
Columbia, SC 29205

I was interested to learn the other day that MicroPro International just bought Newstar Software. If you're a *WordStar* fan you ought to appreciate that announcement. MicroPro is the manufacturer of *WordStar*. NewStar is the manufacturer of *NewWord 3*. It should mean that *WordStar* will begin moving again. The announcement is good news because *WordStar*, once leader of the pack, has been sniffing the flowers much too long.

In a curious way we've all benefited from *WordStar's* long rustication. There is precedent. The first word-processing program for the IBM PC was written by Captain Crunch in his spare time, of which he had quite a bit right then because he was doing a stretch for defrauding Ma Bell out of long-distance phone charges. With such competition *WordStar* could have dominated the market and made competition difficult if not impossible: it was so great a superstar, a veritable Lassie in a pack of dogs. But MicroPro forgot, or got confused, or something, and began competing with itself. With that kind of competition it had to lose. When *WordStar* no longer was the obligatory first thought in choosing a word processing program, we had the opportunity to get splendid niche products such as *XyWrite III* and Microsoft *Word*. The result right now is that most major word processing programs for compatibles are at least pretty good.

Don't mistake me. I'm not saying you can pick a package at random and expect to find happiness ever after. The way things are right now, you'll probably waste your time and money making a choice that way. I'm not convinced you'll do much better poring over reviews either. Even most really good reviewers make the fatal mistake of judging all word processing programs as general tools — as the single best word processor for every job. You might as well march forth as Mr. Fixit equipped only with a hammer.

Someday I'd like the opportunity to write at length on the subject because I'm tired of battles over word processing tools provoked by people who have used only one or a couple. They miss the

point. Worse, they mislead other people into making bad choices of perfectly good programs. What's the function of the person using the program? A typist transcribing a document needs a different kind of program from a professional writer composing at the keyboard and a businessman batting out correspondence. What's the nature of the business or profession? The thing passing as English exposition in business circles would be bogged down by a program that drags around the potential for displaying Greek and printing footnotes, while the English professor who might kill for such capabilities will get frustrated pretty soon by a program that does complex math in the middle of his immortal prose. What's the intended output? It's awful taste and a misunderstanding of situation to send business letters that look like badly-printed junk mail. I toss them, unread. In my role as Professor of English, I discourage students from submitting papers like that too: I want them to display their knowledge of clearly-defined writing conventions, not disguise them with misunderstood conventions of printing design. Besides, who can read with comprehension a paper presented in justified lines of 8-pt. characters 65 columns wide?

The situation reminds me of the toaster oven we got years ago: it doesn't toast well, doesn't broil well, doesn't bake well, doesn't heat frozen foods well, and doesn't do anything else well. But, my oh my, just look at the sheer number of things it does not well.

Why, really, should any one word processing program be expected to meet any better the infinitely more complex needs of people writing different kinds of things for different kinds of purposes?

Because I do several different kinds of writing, I'm interested in a variety of word processing programs. I'm much more open and receptive, an attitude that has been saving me from putting my foot in my mouth too often. Some years ago a lawyer friend mentioned that his office had standardized on *DisplayWrite 3*. I

wincing, grimacing, and twitching creatively enough so he hired me to analyze his real needs and recommend the word processing program that would meet them. I did, diligently. I winced, grimaced, and twitched to deserve an award as I ruefully delivered a report that led inexorably to the conclusion that his office should standardize on *DisplayWrite 3*. Awful experience. I work a lot now on controlling my wincing, grimacing, and twitching. You can't do general recommendations of a word processing program, and you can't trust your friends to know what you need.

Notice that I haven't even mentioned the subject of taste and personal preference, both of which are important to choosing a word processing program. I am an absolute sucker for multicolored programs and I will spend hours getting the colors just right. I've never written anything with them though: not one complete paragraph. My mind seems to wander to the glittering display and focuses on distinctions among hues or colors I see there. I begin fine tuning the colors once again. Crisp monochrome is what hooks my brain to my fingers. I don't know why, although I have some thoughts of interest mainly to me.

Taken from that perspective, the current crop of word processing tools is excellent, with remarkably few culls that I've seen. One big reason why there's so much so good is that *WordStar* was neglected so long that it didn't simply dominate the word processing market. It could have been on MS-DOS what it was on CP/M: nearly the perfect toaster oven, a general-purpose word processing program that does well almost everything it does.

### **WordStar Revivodus**

As near as I can figure, the last version of *WordStar* — version 3 — appeared in April 1983. It was eons ago in the evolution of word processing software for microcomputers. So *WordStar* has been frozen in time while new species were born and developed into titans. MicroPro continued selling *WordStar* but stopped working on it. The company's attention, already misspent on products such as the weak spreadsheet *CalcStar*, went instead to the entirely new word processing programs *WordStar 2000* and *Easy!* What's odd is that months before each of these things appeared the grapevine began to shake with anticipation about a forthcoming new version of *WordStar* itself. People ran around panting with desire for it. You'd think someone in charge of MicroPro might have gotten the point that maybe people really wanted its flagship product *WordStar*. But there are none so blind as those who will not hear.

If you've been around a while, you'll know that the PC versions of *WordStar* were translations of the last CP/M version. Before I dumped *WordStar* altogether a while back I used to patch my IBM PC version with the aid of code locations I had worked out for my Kaypro 4-84 version, and that ancient bundle of sheets was born long before I bought my Kaypro. As the kids would say, we're talking *old*.

There must be reasons why so many of us still care after all these years of neglect. I can point at a few of my own specifics. *WordStar* is available for so many different kinds of microcomputers that it's almost a universal tool. I had it on my TRS-80 Model II, on my Kaypro, on my Z-100 under CP/M and MS-DOS, on my 152, on my 158, on my 241, on my IBM PC 3270 at the University, and on just about every microcomputer I've ever used — from Apples to Xeroxes. (I've already covered the Zs and I can't bring myself to misspell "Xerox.") *WordStar* works exactly the same on all of those machines. So ubiquitous is it that *WordStar* files — even the document files with control codes that make other word processing programs choke — have become a medium of exchange. There

are other specifics I could offer in explanation of *WordStar's* longevity and you, if you're a *WordStar* user, will have more of your own.

When we're through with specifics, though, we'll both probably agree that at least one overweening reason for *WordStar's* long life is that its basic concepts are superb. It is a document-oriented program that processes words marvelously well and rarely breaks. If you don't like the way something works, and if you have the knowledge to do the fiddling, you can change the program: it has a nice, open architecture. So open is it, in fact, that MicroPro used to publish *WordStar Customization Notes* with an accompanying diskette that allowed you to change the user interface however you'd like. My own childhood included an embarrassing phase in which I reconfigured *WordStar* to work nearly like Radio Shack's *Scriptsit*. Janet refused to touch that thing I made and I hope you won't betray my confidence.

### **NewWord 3**

The reason why I keep referring to *WordStar* as belonging mostly to my past is that for some time now I've been using *NewWord* instead on all my computers: the CP/M machines, such as the Kaypro and one side of the Z-100, as well as my compatibles. It's just like *WordStar* in availability. I use other word processing programs, editors, and print formatters too, because I like using the right tools for each job and because I'm fortunate enough to have access to almost any tool on which I'm willing to spend time exploring. When I want a *WordStar*, though, I use *NewWord 3*.

*NewWord 3* is *WordStar's* descendant. It's much like what *WordStar* would have been if *WordStar* had continued to develop. The concepts of the two programs are exactly the same. So are the files. So is the approach to commands, the command structures, and even many of the commands themselves. There is no way you or any of your programs can tell whether a file has been produced with *NewWord 3* or *WordStar*. You therefore can edit a *WordStar* document with *NewWord 3* and *vice versa* — and no conversion is needed. You also can move from using *WordStar* to using *NewWord 3* with no instruction whatsoever: all but a few *WordStar* commands work just the same in *NewWord 3*. If you want even those things to be the same, you can change them easily from the customization program included with *NewWord 3*.

After a little while, though, you won't want to change those things because they work better in *NewWord 3*. For example, the backspace key deletes as it backspaces, the CTRL-N combination softens hard carriage returns, and the CTRL-Q-P combination jumps to the page you specify.

But *NewWord 3* is more than just *WordStar* fixed up.

Its additional capabilities start with a complete adaptation to MS-DOS. For example, the program handles subdirectories magnificently well. You can run *NewWord 3* from any subdirectory on your system, so you don't need a kludge like my *WordStar* directory changer. You can shell from *NewWord 3*, so you can drop from editing a document to run a DOS command and return to where you left off. Since *NewWord 3* is an MS-DOS program, not a translated CP/M program, it uses MS-DOS's additional memory well enough to give you at least two of the features you always wanted: the ability to undelete your last deletion, and the ability to see a decent onscreen display of formatting features such as underlining (real underlining on a high resolution monochrome monitor) and boldface.

My role here is not to spew the *NewWord 3* manual at you, so I won't continue this guided tour. I will, however, indulge myself

enough to talk about one big thing and one little thing. Both make *NewWord 3* a professional writer's dream. We often have to write to space, which really means to a specific number of characters. Press CTRL-Q-? in *NewWord 3* at any point while working in a document and you get a count of the characters in that document from its beginning to that point: 12,371 up to that colon. Once you know how far you've come, you know how far you have to go. It's a small touch, but valuable. One of the big touches is the spelling checker integral to *NewWord 3*.

The spelling checker inside *NewWord 3* is the first spelling checker I've seen in a word processing program that works the right way for a professional writer. It's really an interface to Oasis's *The Word Plus*, a decent but now creaky standalone spelling checker bundled with *NewWord 3* and other word processing programs. I wouldn't consider using *The Word Plus* alone anymore. But I don't have to think of doing that because some genius at Newstar designed his own brilliant interface to *The Word Plus* word lists. You might not realize that it's what's going on when you use that interface because the seams don't show. All you see is an easy-to-use, well-designed, apparently-simple spelling checker that is so thoroughly a part of *NewWord 3* that it seems to have grown there as a model of the organic principle applied to programming. You can check one word or the entire document or the document from your cursor to the end — all without leaving the document. When the checker hits a word not in its lexicon, it offers a numbered list of "close" words: you can choose by number and the substitution will be made for you. Of course you can enter a replacement of your own, skip the questioned word, or add it to the dictionary. And everything is lightning fast.

All those aspects of the spelling checker are very nice. What makes it distinguished, though, is that *NewWord 3* gives you the option of having it look up a word you're thinking of using. And you can use wildcards for uncertain parts of the word. So *NewWord 3* has neatly removed the problem of how to look up the spelling of a word you barely know how to spell. Press CTRL-Q-O and enter the letters you know, with "?" to mark the place for single letters you don't know and "\*" to mark the place for groups of letters you don't know. *NewWord 3* will give you the numbered list of any matches in its dictionary. It's a much better approach than the one used by programs like *Turbo Lightning*, which has to monitor every keystroke if you want it to alert you to possible misspellings. Since I started using *NewWord 3* I pulled *Turbo Lightning* off my hard disk.

Big touches, little touches: *NewWord 3* is what *WordStar* might have been had it continued to develop. Now MicroPro has bought Newstar with the avowed intention of introducing — at long last — a new version of *WordStar* that will benefit from *NewWord 3*.

If you order *NewWord 3*, make sure yours is version 3.02: version 3.01 had a bug (phantom characters that sometimes remained on display after block deletes) on Heath/Zenith compatibles. Version 3.02 is fine.

### **XyWrite III**

Fast, flexible, powerful, and irascible. That's the *XyWrite III* I love. It's James Cagney or, for a later generation, Richard Widmark. Nah, it's both of them together. If there's anything you want a word processing program to do — anything at all — *XyWrite III* will do it. And it will do so faster than a bolt of greased lightning.

One of my favorite pastimes for a while was building really big documents in *XyWrite III* so I could watch its tricks. All I'd do is pull

in a big ASCII file and copy it to itself several times until I got tired. Then I'd hit the keys to send me from one end to the other, then back again, then forward again. Snap. Snap. Snap. You could almost hear the whiplash each time. Then I'd change the line length at the beginning of the document and see if I could catch the reformatting in action. With a big enough document I could, almost. Justification, ragged right, ragged left, and centering: those all are show stoppers. Insert their codes anywhere in the document and try watching that sucker move.

*XyWrite III* is the fastest-moving editor I've ever seen, the fastest-moving editor I could ever imagine, and I won't believe you if you tell me you've seen faster. It can't be. I have it on my 152, my 158, and my 241, and the most noticeable difference I've found in its performance on all those machines is that its big spelling-and-hyphenation dictionary loads faster on the AT compatible than on the XT compatibles. Loading that dictionary is the only slow part about using *XyWrite III* and it's slow only by comparison with everything else about *XyWrite III*. Pure impression had been my gauge until a few minutes ago when I used a stopwatch. The total loading time — including the time it takes to load the spelling-and-hyphenation dictionary — is almost exactly the same for loading *WordStar*. *XyWrite III* is fast.

If you've done anything with typesetting, especially with computer phototypesetters, you'll have noticed that much of my vocabulary with respect to *XyWrite III* so far has been drawn from that world: "justification," "ragged right," "ragged left," and especially "spelling-and-hyphenation dictionary." While many other word processing programs now are groping towards tight control required to emulate typesetting on a personal computer, *XyWrite III* started there and has been moving towards geniality. It offers absolute control over console display and printer. If you need some odd character, you can configure *XyWrite III* to show it or — absent an equivalent in the IBM character set — at least to represent it on the monitor. If you have some odd printer, you can configure *XyWrite III* to use it. The program comes with drivers for many different printers including some as obsolete as my Radio Shack *Daisy Wheel II*. Should you have a printer for which there is no canned driver, it's a snap to roll your own provided you know the codes for your printer and are willing to follow instructions in one of the four manuals for *XyWrite III*. With both kinds of knowledge you ought to have no trouble using your compatible and *XyWrite III* as the front end to a phototypesetter. My hunch is you might even be able to get *XyWrite III* to carve hieroglyphics if you could figure out the interface to a hammer and chisel. *XyWrite III* provides control.

There are costs. *XyWrite III* takes over the computer almost completely, blocking the use of Terminate and Stay Resident programs like *SuperKey*. Others like *SideKick* and *Perks-PC* may cohabit with it. As a rule, though, forget most TSR programs when you use *XyWrite III*. You can change the keyboard driver to the supplied DOS.KBD and use just about any TSR program but then you lose *XyWrite III*'s own magnificent keyboard handling. If you tune into *XyWrite III* and have routines of your own, you might not need a keyboard redefinition program like *SuperKey* though: *XyWrite III* has excellent macro capabilities you can use instead. See, you're swapping options and benefits just as you have to do whenever you think about word processing programs. Is *XyWrite III*'s macro capability sufficient to compensate for the loss of ability to use something like *SuperKey*? Of course they are — unless they're not in your application.

Another cost of *XyWrite III*'s capability to control everything in the room is a complex set of commands. People new to word proc-

essing and people who move there from typesetting are two groups who should be troubled least of all. If you know nothing you have nothing to unlearn, and if you already have *XyWrite III*'s orientation you're going to mumble "piece of cake, piece of cake" and make the typists around you angry. All others pay cash. The real problem for me is that I can't figure out much consistency to the marriage between keys and commands. What the F keys do when shifted, unshifted, controlled, and alted seems altogether arbitrary. *XyWrite III* comes with one of those plastic cheat sheets you can hook around the F keys. It's the only one I've ever glued to the keyboard because this is the only program that needed constant help and didn't get jettisoned because it needed constant help. I won't give up *XyWrite III*. I sure wish, though, that XyQuest would hire a logician to get just a tad more consistency to the commands.

Nevertheless, what a marvelous thing is *XyWrite III*. If you are a real, honest-to-goodness professional wordsmith who knows the craft and wants a word processing *instrument* you can't do better than *XyWrite III*. I think of it as the word processing equivalent of a *Diplomat* pen.

### Microsoft Word

I hated *Microsoft Word* version 1, which was bundled with my Z-152. I hated it so much that I turned down version 2 as not worth any time at all. With the passage of years I've calmed down enough about *Microsoft Word* so that when version 3 came I could face the thought of ripping it into little shreds and stomping the pieces into my office carpet and twisting them in with my heel. I'm nothing if not absolutely fair and open minded.

Much to my astonishment, I kind of like *Microsoft Word* version 3. It's faster than what I recall of version 1 and when I choose the **Library** function from the menu something happens other than a raspberry and a reprimand. They are what set off my epic tantrum: version 1 had a stub, a message programmers use to mark parts of a program they haven't gotten around to writing. But, then, I'm one of those odd people who think that since we pay real money we deserve real goods. Unreasonable, I know. Since *Microsoft Word* version 3 is a finished product, I'm able to look at it differently.

It just came, though, so I haven't had the time I want to spend seeing how it really works. What I notice right off the bat, in addition to my impression of more speed than I recall in version 1, is much more functionality than I remember. The obvious additions are outlining (apparently based on Living Videotext's *Think-Tank*, spelling (based on Oasis' *The Word Plus*), a garland of conversion utilities to import and export files (including Revisable-Form-Text DCA), and a host of printer description files for output to a book (one of three manuals) full of output devices including those that use *PostScript*.

That kind of advanced, intensive, across-the-board printer support is significant to the way I'm thinking of *Microsoft Word* now: as particularly useful for people who have to, or do, think of documents as graphics objects on a printout page. Janet thinks like that, just as any good graphics designer should. It's an orientation that can lead to "desktop publishing" (really "desktop page composition" or "desktop printing," because "publishing" means something entirely different). Even from the little time I've had with *Microsoft Word* so far, it looks useful for such purposes. You ought to be able to use it with a good dot matrix printer for inhouse jobs, catalogues, and newsletters. I have a colleague who is using *Microsoft Word* and an Apple LaserWriter to set foreign-language books he publishes. Knowing only version 1, I thought him quite

mad. Now *Microsoft Word* seems finished, however, I'm going to look into the same thing myself.

What I have, by the way, is the "network version." It's supposed to work on most major local area networks. I'll let you know.

### Control-Z

You've noticed the pattern, I think: each of the word processing programs I've discussed here is in its third major revision. The catch is that *NewWord 3*, *XyWrite III*, and *Microsoft Word* version 3 all are in their third major revision for compatibles. *WordStar* version 3 — still the current version — is still the first major version for compatibles. It has some catching up to do. The good news is that now it has a chance. At this stage in the development of word processing software, its revitalization with a healthy dose of *NewWord 3* should benefit us all.

### Products Discussed

<i>Microsoft Word</i> (Version 3) Microsoft 16011 N.E. 36th Way Redmond, WA 98073 (206) 882-8080	\$450.00

## Mainstream Mailbag

### Monochrome Matters

Dear Dr. Katz:

I thought I'd take the time to tell you how much I enjoy your PC compatibles column in *REMark*. I have an H-151 which I built (3691 solder joints) with MS-DOS 2.11 and the H-329 high resolution monochrome board. What I've discovered is the enormous(!) lump of information/knowledge to be assimilated prior to operating the PC with comfort and confidence. It's been 10 months, and I'm still not there yet. But your column is helping. Thanks for writing it.

Is there anything else I can do with the monochrome board besides word processing? Much to my sad realization, little of the common IBM software/games will work its display.

David A. Secrist  
Cincinnati, OH

Dear Mr. Secrist:

*The learning intrigues me too. Thanks for your letter: it's good to know my work makes a difference.*

*I kept your interest in mind when I wrote the last few columns. I'll continue to do so.*

*You ought to enjoy your H-329 high resolution monochrome board and monitor more for having read my own dismay that it took me so long to get them. They're really special-purpose tools for text work. Enjoy them for their superb character resolution and the attributes that the CGA (Color Graphics Adaptor) does not provide. I'll explain in a moment.*

*No, your monochrome setup will not run graphics software or most games I know. But all you need to run them is an inexpensive monochrome monitor. It plugs into the composite output on your 151. Since the 151 comes standard with a CGA, you're way ahead of those who own other brands of compatibles: you don't have to buy a CGA board. I'd most certainly do a little shopping for at least a monochrome monitor.*

*If you're serious about games or graphics software, you might want to look at RGB color monitors, which plug into the output just below the composite jack. They're considerably more expensive than composite monochrome monitors, but you might be able to get a good deal on one right now. Many dealers have attractive sale prices on them.*

*What I'm saying is that far from being stuck, you're really in an excellent position: all you need is the monitor itself (and the cable for it that came packed with your 151) to do everything you want to do.*

*If you follow my suggestions, you'll soon go nuts from having to use MS-DOS's Mode command to switch displays from one monitor to the other when you move from graphics to text. (Since you're used to the superior text displays on the high resolution monochrome monitor, you're going to find the CGA display of text absolutely unacceptable.) You'll therefore want DS.COM (on HUG software disk 885-6009-37), which will show text simultaneously on the CGA and monochrome displays. I'd therefore set the 151 to boot with the CGA display and use DS when you get down to business.*

*My guess is that the two things together (composite monitor and the HUG disk) will cost you around \$110, assuming you get a good price on a composite monitor. I had to spend considerably more when I added the capabilities you already have. You're one up on me.*

*You don't say what word processing program you now use, so I hope it's one that takes advantage of those special attributes I mentioned earlier. I'm thinking of true underlining, for example. If your word processing program doesn't let you see it, you ought to examine NewWord 3, WatchWord for the PC, or XyWrite III.*

*What I'm trying to suggest is that you capitalize on the potential in your machine. You've already spent the big dollars.*

Joseph Katz

### Communications Programs For Four COM Ports

Dear Dr. Katz:

I am looking for software, preferably Public Domain, which I can use on my machine: a Zenith 151 with the ZOOM/Modem PC 1200 XL.

As your article mentions, the Z-151 machine came with two serial ports. So I configured the modem for COM3: and COM4: as the ZOOM manual directs. Yet the only known software which works with it, configured for COM3: and COM4:, are the ZOOM demo (no file transfer) and **Crosstalk XVI** (Version 3.5 or later — but poorly written manual). I have tried many sources for software

recommendations or other suggestions including: Boston Computer Society, local bulletin boards, ZOOM Telephonics staff, Zenith staff, and Heath Users' Group staff. Could you suggest a software package?

I am also aware that there are software fixes which allow one to disable one of the standard serial ports. I would prefer not to go this route since I would be losing capability (although nothing is presently connected to either port).

Furthermore, your article mentioned that MS-DOS, with programming, can address four COM ports. In fact a programmer friend of mine tried this and failed. Could you provide information on how to do this for my machine?

Kevin W. Yearwood  
Cambridge, MA

Dear Mr. Yearwood:

*Nope, I don't have time to instruct you on assembly language programming by mail. Sorry. If your friend is a programmer and couldn't do it, maybe Mother Nature is painting a big sign telling you both to lay off? I'd pay attention to that sign: It's dangerous to diddle MS-DOS when you don't really know what you're doing.*

*I don't own an early H/Z-151 — the one that came with two serial ports — so I'm not familiar with canned software to disable one of its ports. All I think it should do is shift one port address temporarily, which would mean you wouldn't lose any capability at all. The most laborious thing you might have to do is reboot the computer if you wanted to use the original COM1: and COM2: ports. As I say, though, I'm really only surmising. Since you're not interested in that approach anyway, I won't pursue it.*

*I do know three commercial communications programs that can be configured to address COM1: through COM4: — **HyperACCESS**, **Crosstalk XVI**, and **Mirror**. I haven't tried using any of them on COM3: or COM4: but all three are first-class packages that should perform in that respect.*

*I don't know any public domain software with a menu option to address COM3: or COM4:. The best way I know to learn about every single one in existence is for me to say here that there aren't any. So, to help you out, I'll say that I don't think there are any. After all, not many people own machines with even two COM ports, much less four COM ports.*

*What you really need, I think, is **HyperACCESS**. First reason: It supports COM1: through COM4: so all you have to do is tell it to use the port you want used. Second reason: It has a configuration option for the **ZOOM/Modem** so all you have to do is tell it to install itself properly. Third reason: It's produced by Hilgraeve, Inc., a company that has specialized in communications with Heath/Zenith computers since the beginning of time so they'll know communications on your machine better than any other company — perhaps even better than Heath itself. Fourth reason: Hilgraeve is one of those companies whose support of Heath/Zenith machines is so distinguished that it has become a reason why people in the know buy Heath/Zenith. Besides all that, you'll have the pleasure of knowing you own a communications program that has received nothing but rave reviews — from magazines specializing in IBM computers, from communications specialists, from everyone. You have a first-class modem in a first-class system, so get a first-class communications package written especially for your*

equipment: buy **HyperACCESS**. Anything else would be a pointless compromise, I think.

Joseph Katz

**Note:** Letters sent to Joseph Katz may be published, perhaps after condensation or other editing. He cannot guarantee a reply by mail, and he won't reply by mail unless you enclose a stamped, self-addressed envelope. \*

## HOME FINANCE SYSTEM VERSION 2

—An extensive Home Finance System that keeps track of checking, asset accounts (cash, savings, IRAs, CDs), and regular bill payments. Let your printer write your checks for you on any business-sized check (design your own check format).

—Checks have user defined codes and a separate flag for tax deductible items.

—Many reports, including listing all checks, or checks by codes or tax flag.

—System consists of 130 page users manual with 5 program disks (5-1/4") and a sample data disk.

**Hardware:** H8/HZ89 (64K) or HZ100 with 2 disk drives. Any Heath®, Zenith® or other printer.

**Software:** CP/M or CP/M-85/86 (Ver. 2.2) and MBASIC 5.21 for CP/M.

**Order:** Complete System \$89† (specify hard or soft sector 5 1/4", HZ89 or HZ100). Manual alone \$21.†

MasterCard/Visa accepted, please include your phone number.

†Prices include shipping.

## EVERYTHING YOU NEED... \$279<sup>00</sup>

Now it's easy to program the Heath-Zenith HERO-1® Robot with an Apple® II. HERO® Macros for the S-C Software 6800 Cross Assembler program in Heath's Robot Interpreter Language with easily remembered mnemonics.

For example, the line: 1130 > MVWRIM GRIP, OPEN, 60, FAST instructs the HERO® to open his gripper 60 units at fast speed. Motor position is expressed in base-10.

The HERO® Macros come with 30 pages of documentation. Transfer to HERO® with ROBI... an affordable interface for the robotics experimenter... is simple.

- ROBI is a complete package. No additional hardware required for Apple® or HERO®.
- ROBI installs quickly in an Apple® II, II+, or IIE. Once installed, no hardware changes are needed. Within minutes, you will be programming HERO®.
- With ROBI and the Cross Assembler, the programmer uses Apple's memory to write the program, and HERO's memory to run the program.
- Not "copy protected," archival copies may be made as needed.
- ROBI offers expansion potential.

VISA and MasterCard accepted.

### BERSEARCH Information Services

26160 Edelweiss Circle  
Evergreen, Colorado 80439

The Cross Assembler with HERO® Macros sells for \$100.00; the ROBI Interface sells for \$199.00. Both as a package — \$279.00.

To order, or for more information, call (303) 670-6137.

APPLE® is a trademark of Apple Computer. HERO® is a trademark of Heath Electronics.

## VAX & PC Users

### ZSTEMpc™-VT220 Emulator for the PC Series

High performance COLOR VT220. Double high/wide, 132 mode, smooth scrolling, downloadable fonts, user defined keys, 8-bit and full national/multinational modes. XMODEM and KERMIT, software/MACROS, DOS access. **\$150.00**

**ZSTEMpc™-VT100 Fastest, most complete emulation \$99.00**

### ZSTEMpc™-4014 Emulator for the PC Series

Use with ZSTEMpc-VT100, VT220, or stand-alone. Interactive zoom and pan. Save/recall images to/from disk. Keypad, mouse, printer, and plotter support. **\$ 99.00**

**ZSTEM™-VT100 Emulator with XMODEM FOR THE Z-100 \$148.95**

### DECKHAND™ Utilities for the Z-100 and PC Series

MS-DOS Utilities with VAX/PDP-11 switch processing, DIR, COPY, DELETE, RENAME, TYPE with wildcards, full DATE processing, attribute processing, query, backup and more. **\$ 49.00**

Call today: VISA and MasterCard accepted. Quantity and dealer discounts available 30 day money back guarantee. AIR MAIL POSTAGE included for US & Canada

## Z-100 PC Memory Expansion with ZPAL™

### Z-151/Z-161 Users

Use 256K bit memory chips on the original memory board. Extend the memory to 640K or 704K bytes with ZPAL-2 Decoder **\$29.00**

### Z-158 Users

Extend your system to 768K bytes with 3 banks of 256K bit memory chips and ZPAL-158 decoder.

704K contiguous + 64K separate or 640K contiguous + 128K separate ZPAL-158 Decoder **\$ 36.00**

### Z-138/Z-148 Users

Extend your system to 768K bytes with 3 banks of 256K bit memory chips and ZPAL-148 decoder.

704K contiguous + 64K separate or 640K contiguous + 128K separate ZPAL-148 Decoder **\$ 36.00**
